Education Amendments 1974; Michigan

ABSTRACT -

To provide coordination and technical assistance through a regional approach to local Michigan school districts, a career education implementation project was conducted based on the following nine sub-goals: (1-2) the development and infusion of career education activities into the existing curriculum by teachers and counselors: (3) staff participation in inservice programs: (4) development and implementation of community-involvement strategies: (5) utilization of needs assessment and goal-setting processes: (6) development of a seguential K-Adult curriculum plan: (7) development of an occupational information system: (8) development of an evaluation plan: and (9) facilitation through model planning efforts and supportive planning inservice. Pased on these sub-goals, thirty-five objectives were identified. Seven Michigan career education planning districts participated in the project. Each planning district was responsible for at least one objective in each of three sub-goal areas. It was found that 78% of the objectives were successfully accomplished and that many planning districts were providing more services than required. Although achievement testing was included in the evaluation plan, the achievement related to career education required the development and use of criterion-referenced tests, which were generally open-ended type items: This did not permit the usual statistical analyses and comparisons: however, results indicated that both the experimental and control groups improved in achievement. (A career education planning district manual is appended.). (BM)

FINAL PROJECT PERFORMANCE REPORT

1. Project Number: 554AH50324

2. Grant Number: G007502399

3. Nature of Report: Final

4. Project Title: REGIONAL COORDINATION AND SUPPORT PROGRAM FOR CAREER DEVELOPMENT

5. Grant Period: July 1, 1975 - June 30, 1976

6, Project Category: Incremental, Career Education Program

7. Project Director: James L. Mahrt

8. Grantee: Vocational-Technical Education Service

Abstract						Section	7

9. MAJOR ACTIVITIES .

For this section, each objective as listed in the project proposal is detailed in the following pages. For each objective there may be as many as six sub-objectives with activities and timelines. Each of these subobjectives represents one or more of the six regional centers who were responsible for carrying out activities under each of the major objectives.

The format and explanation for this section is as follows:

Goal: (listed from pages 12-13 of the proposal)

INTRODUCTION

This study was undertaken by the evaluators in a third-party role to examine the Michigan Career Education Program. An evaluation contract was-made between the Macomb Intermediate School District, Mt. Clemens, Michigan serving as the fiscal agent, Mr. James Mahrt of the Career Education Program, Michigan Department of Education, and Dr. Donald R. Marcotte, and Dr. Joseph L. Posch, Jr., principal evaluators of the project.

The program to be evaluated is the Regional Coordination and Support Program for Career Development, which was submitted to and approved by the Career Education Program, United States Office of Education, Application Control Center, 400 Maryland Avenue, S.W., Washington, D.C. 20202.

The major goal of the program is:

To provide coordination and technical assistance through a regional approach to local districts as they plan for and implement career/education programs.

To help accomplish this goal, nine subgoals were identified and appear as follows:

- Teachers in participating districts will design and implement career education activities into the existing curriculum by utilizing an infusion process.
 - Counselors in participating schools will design and implement career education activities in cooperation with teachers, independently and/or with other staff or community members.
- Teachers, counselors and other appropriate staff members will participate in inservice programs designed to increase their career development skills in organizing, facilitating and delivering career development outcomes to students.

Application for the "REGIGNAL COORDINATION AND SUPPORT PROGRAM FOR CA-REER DEVELOPMENT." Submitted by: Career Education Program, Michigan Department of Education, Box (928, Lansing, Michigan 48904, April 18,1975 (page 12).

- .4. Local district and regional career education personnel will develop and implement strategies for involving and obtaining community participation in career education programs.
- Regional and local career education personnel will utilize needs assessment and goal-setting processes to identify comprehensive career education program goals.
- 6. Regional and local career ducation personnel will organize liaentified career development outcomes into an articulated and sequential K-Adult curriculum plan.
- Regional and local career education personnel will design, develop and implement an effective occupational information system.
- 8. Regional and local career education personnel will identify and/or develop effective career development evaluation strategies, programs and instruments.
- 9. Regional and local career education personnel will facilitate career education planning efforts through model planning efforts and supportive planning inservice.

Finally, thirty-five objectives related to the above listed nine subgoals were identified and are presented in Appendix A.

Although not a part of the original application, it was decided by the Michigan Department of Education Career Education Program that in addition to looking at the stated goals and objectives in the application, there should also be an analysis of student achievement between students participating in career education programs and students not participating in these programs. Since this was an addendum to the original application, only planning districts who volunteered to participate in this aspect of the evaluation will be a part of this evaluation report.

PROCEDURES

This section of the interim report consists of the evaluation design, selection of objectives, feasibility of achievement testing, instrument development and data analysis.

Evaluation Désign:

The evaluation design for this evaluation consists of the following:

- 1. The identification and selection of Objectives by each career education planning district.
- 2. A/pre- and post-administration of a survey questionnaire, developed from the objectives contained in the proposal, to all planning districts.
- 3. Monthly administration of a monitoring form, using the activities listed for each objective, by Michigan Department of Career Education Program staff to career education planning district coordinators.
- 4. Site visits by external evaluators using a standardized instrument developed from the objectives and activities contained in the proposal.
- 5. Pre- and post-administration of standardized achievement tests for planning districts who volunteered to participate in the achievement aspect of the evaluation.

<u>Selection</u> of <u>Objectives</u>:

Figure 1 shows the name and code of the participating career education planning districts. Codes, rather than actual names; were used for the planning districts to simplify the presentation and interpretation of figures and tables.

FIGURE 1 NAME AND CODE OF PARTICIPATING CAREER EDUCATION PLANNING DISTRICTS

Name of Career Education Planning District	Code

Cheboygan-Otsego-Presque Işle Intermediate School District)* 84
Calhoun Intermediate School District	. 12
Genesee Intermediate School District	29
Kent Intermediate School District	32
Macomb Intermediate School District	40

The thirty-five objectives listed in the original proposal were not specifically assigned to the career education planning districts, although these districts were responsible for submitting these objectives prior to the submission of the application. Therefore, a meeting was held on November 13, 1975 at the Michigan Department of Education in Lansing with Career Education Program staff, planning district coordinators, and an external evaluator for the express purpose of having planning district coordinators select specific objectives. As a consequence of this meeting, objective responsibilities were identified for each of the participating districts as shown in Figure 2.

As can be seen from Figure 2, each planning district was responsible for at least one objective in each of three subgoal areas. All nine subgoal areas were represented by at least two career education planning districts. A listing of the thirty-five objectives representing the nine subgoal areas can be found in appendix A.

¹ Objectives appear in Appendix A. 2 is to be replaced by the number appearing in a cell.

³ Objective does not appear in monitoring form for this district.
4 According to monitoring form, not an objective for this district.

Feasibility of Achievement Testing:

At the November 1975 meeting in Lansing of planning district coordinators, all districts indicated that they were interested in the achievement testing of students participating in career education programs. Planning district coordinators were informed that for comparison purposes students not participating in career education programs would have to be identified and tested. Two career education planning district coordinators volunteered to participate in this aspect of the evaluation and examined technical, financial and Togistical considerations for this phase of the evaluation. As a result, only Planning District 29 participated in the achievement aspect of this program.

Instrument Development:

Instruments used in this project were developed from the objectives and activities provided on the "Description of Program" forms which are a part of the <u>Application for the "REGIONAL COORDINATION AND SUPPORT PROGRAM FOR CAREER DEVELOPMENT."</u>

The instruments developed were:

1. Monitoring Form.

This form was used by Michigan Department of Education Personnel with coordinators of planning districts on five separate occasions.

Forms are unique in that the activities contained within each, form are specific to each planning district.

Career Education Questionnaire.

Administered by the external evaluators twice during the year-once in December 1975 and once in June 1976--to coordinators of the planning districts. Statements on this form are specifically related to the thirty-five objectives contained in Appendix A.

3. Interview Schedule.

Administered to planning district and local education agency personnel by the evaluators in May-June 1976. This form consists of general statements related to specificity of objectives and activities and to operational considerations in fulfilling the requirements of the contract.

The purpose of the three instruments is to determine which objectives and activities are being met by the career education planning districts and to determine the overall effectiveness, operationally, of the program.

Data Analysis:

Since the evaluation of the project is confined primarily to the collection of baseline information, all analyses are descriptive in nature. Enumeration of reported activities and actual responses to the survey questionnaire and interview schedule are presented in tabular form, with percentages provided where appropriate.

RESULTS AND DISCUSSION

It can be seen from Table 1 that each of the seven planning districts had a variable number of activities which they were required to complete. Four of the seven districts changed in the number of activities required for completion during the January-July time period. This resulted from a clarification of objectives and activities related to these objectives during the early part of 1976.

Also shown in Table I is the percentage of activities completed by July 1976 which ranged from 42% to 80%. The percentage of activities not completed ranged from 4% to 58%. Of considerable interest is the category "Not Applicable" wherein it is shown for four of the planning districts that shifting occurred downward(reduced frequencies) primarily as a result of monitoring and evaluation efforts in clarifying which objectives were selected and which activities were appropriate for these objectives.

With the exception of one planning district, it is clear from the reduction of responses in the "Do Not Know" category that there was clarification with respect to the required activities.

In general, it can be seen that there was a marked increase in the number of activities completed during the January-July time period. Where an increase in percentage of activities completed did not occur it was due in large part to the increased number of activities required for completion from the first time period to the last.

Information for this table was obtained by using unique monitoring forms for each planning district(monitoring forms appear in Appendix C).

2DNK - Do Not Know.

3NA - Not Applicable.

4NR - No Response.

Table 2 is an enumeration of the participants in each of the career education planning districts. It is clear from the table that there was some difficulty with the category "Local Education Agency Teacher Representatives" in that four of the seven planning districts were apparently unable to identify or did not have any of these individuals. On the pre administration of the survey three of the seven districts could not clarify this category although on the post administration one of the three was able to identify teacher representatives.

Tables 3 and 4 represent the results obtained from both a pre and post administration of the survey instrument which was developed from the original contract. Listed in Table 3 are the responses for the first three questions on the survey. These three questions are presented separately since the response format differed from the remaining thirty-seven questions.

It can be seen from Table 3 that four of the seven planning districts responded affirmatively to question one which referred to the development of an occupational information section. In addition, these four districts also responded affirmatively to question two which relates to the implementation of such a system. With respect to question three, which refers to a plan for facilitating the systematic planning of career education programs, all planning districts responded yes.

Questions four through forty\resulted in frequency counts being provided for each of the questions. Of particular interest here is the identification of a particular question with a specific planning district. This can be done by consulting the Gross-Reference List which appears in Appendix B and Figure 2 on page 7 which shows the objectives selected by the various planning districts.

`18.

Using both sources of information Presented in the previous paragraph it can be seen that 78% of the objectives were met in this project. Objectives 4.1311, 4.1312, 4.1314, 4.1315, 4.1322, 4.1356, 4.1361 and 4.1382 were not met. /

Tables 5 and 6 are the results of the administration of the interview schedule to both coordinators and other participants in the program. Since the relevant questions on the schedule are presented as they appeared in the schedule, it is not necessary to repeat these questions in the discussion. It can be seen from the tables, however, that there was overwhelming support for the program and for the continuance of the program.

As indicated on page 8 in this report, the feasibility of achievement testing was explored with the result that one planning district finally agreed to participate in this aspect of the program. The test questions developed by this district were criterion referenced and, in general, open ended. This did not allow for the usual type of statistical analysis particularly with respect to the comparison of experimental and control groups. It can be stated that for the pre and post administration of the tests both groups improved.

For a more detailed reporting of this information, please contact Or, Joseph L. Posch, Jr., 1400 Kales Building, Oetroit, Michigan 48226.

CONCLUSIONS

To provide a proper perspective for the Regional Coordination and Support Program for Career Development, it should be noted that planning districts were allowed to select objectives on which they would be evaluated. It was found that 78% of the objectives were successfully accomplished even though the activities related to these objectives were not completed with this high a percentage figure. This could be attributable, in part, to the lack of specificity or relevance of the activities.

Also evident from the data collected is the fact that even though planning districts were to focus on specific selected objectives, these districts were providing more services than required. This is clearly demonstrated by Tables 3 and 4.

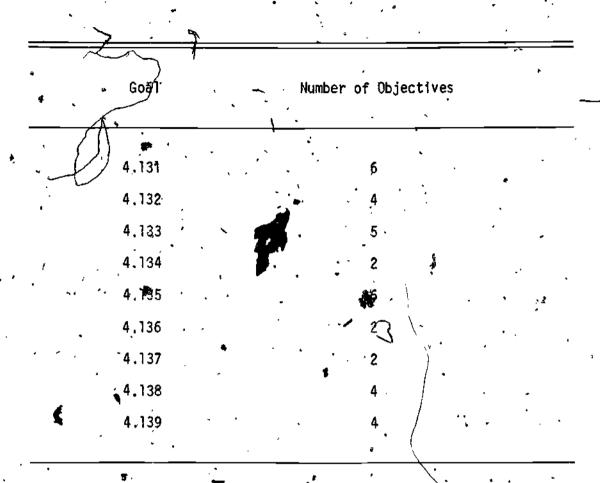

Although achievement testing was included in the project, it was found that achievement related to career education required the development and use of criterion referenced tests which were generally open ended type items. This did not permit the usual statistical analyses and comparisons found in projects that emphasize the experimental approach. It was found, however, that both the experimental and control groups improved in achievement.

4. Changes and/or Problems

4. CHARges AND for PROBLEMS

12. ANTICIPATED CHANGES AND/OR PROBLEMS

12.1 Extension and expansion of training:

During 1975-76 a basic inservice program was developed and tested out with a significant number of staff. As a result of this developmental stage, we anticipate that we will be able to do a better job inservicing the same participants at a higher skill level and train additional local school staff. More importantly, we feel that because the revised training program will focus more on student outcomes, student gains will be better documented and will be at a higher level in 1976-77 than in 1978.

12.2 R<u>esource Utilization</u>:

During 1975-76 agencies at several different levels and job settings struggled to work out cooperative and effective working relationships and a functional organizational structure. Agencies dealt with include the State Department of Education, six Career Education Planning Districts, approximately 60 local school districts and approximately six universities as well as numerous community organizations.

For 1976-77 we feel we have identified the lay individuals and organizations to implement a truly comprehensive career education program. We can focus on implementation, not organization.

12.3 Validation of Career Education Planning Handbook:

The major product developed under the project during 1975-76 was the Career Education Planning District (CEPD) Manual (see Appendix A). This Manual contains all the ideas about organization and strategies that were developed by the regional centers to effectively plan and implement career education programs. It includes sections on: introduction, program planning, staff development and promotion. A special feature of the document is its set of actual forms and examples developed in project schools.

During 1976-77 we hope to validate and refine many of the valuable practices. Also during 1976-77 we plan an extensive dissemination of the CEPD Manual.

5. Dissemination

" 5. DISSEMILATION

13. DISSEMINATION ACTIVITIES

13.1 Presentation at Inservices and Conferences

Over 500 participants have attended inservice sessions which have focused on parts or all of the CEPD Manual (see Appendix A).

These sessions have generally explained what the Manual contained and how to use its contents. In some sessions participants actually applied exercises suggested in the Manual.

13.2 <u>Distribution of CEPD Manual</u>

The CEPD Manual was distributed to all '53 Career Education Planning Districts in Michigan at a special two day workshop in June of 1976.

Additionally 250 copies were made available to other educators through the pareer Education Resource Materials Center at Michigan State University, East Lansing.

€. Special Activities

Special ACTIVITIES

177

14: SPECIAL ACTIVITIES

14.1 Efforts to Reduce Sex Role Stereotyping

The only special activity this project dealt with was sex role stereotyping. In one of our gional centers, a cooperative program was undertaken with the Women's Center at Northern Michigan University, Marquette.

This program dealt primarily with increasing the awareness of approximately 25 counselors in Delta, Schoolcraft and Marquette Counties concerning the forms and effects of ex role stereotyping.

The results of this attempt, as indicated by the following pages, were disappointing. It is apparent that the target audience of counselors, as indicated on the "Attitude Toward Women Scale", is very biased. The fact that additional inservice sessions were planned but not held also indicates a resistance toward change in their attitudes and behavior.

NORTHERN MICHIGAN MINERSITY WOMEN'S CENTER FOR CONTINUING EDUCATION Jim Mart Mary Soper John Peterson From: Re: CEPD 4 and 5 Career Guidance Support Services Program sex-role stereotyping component Date: January 29, 1976.

NORTHERN MICHIGAN UNIVERSITYT

WOMEN'S CENTER FOR CONTINUING EDUCATION

I became involved in the CEPD four and five Career Guidance Support Services Program in an 'after-the-fact' fashion. While in a meeting with Tom Pierson on October 8, 1975 at the Marquette-Alger Intermediate School District (MAISD) office in Marquette, I met John Peterson, Guidance Director at Delta-Schoolcraft Intermediate School District. John and Tom briefly outlined the scope of C.D.S.S.P. They spoke about the sex-role stereotyping component for which John was responsible. I mentioned that I was interested in being involved in facilitating this component. As a result of this initial meeting, John did ask me to help him implement a module that would give the counselors participating in this project, skills in eliminating sex-role stereotyping in instructional materials and student career awareness. This particular module is outlined under point three of the Program Review and Update memo that Carl Arko sent dated October 17, 1975. See index.

I was contacted by John stating that the first in-service meeting at which we would have a place on the agenda would be on October 28, 1975 at the Holiday Ian in Marquette. I was told that we would have one hour to make the initial presentation. I never received formal word regarding this meeting as no agenda was mailed. My only formal contact with this project was and has been through John Peterson.

John and I did have an hour at the October 28th meeting. I was under the impression that this was the first of eight in-service meetings in which we would participate. I therefore choose some materials accordingly. Because of the time and distance involved, John and I did not have a great deal of planning time. However, I did feel that we were prepared to begin to build a base for the rest of this component. We had planned a three part session:

- 1. Materials on Title IX;
- 2. an assessment instrument, Attitudes Towards Women
- 3: a guided fantasy on the Generic Man, an experience in awareness.

My rationalle for beginning with this gaided fantasy as an experiential exercise seems from my basic philosophy. As a counselor and person involved in the 'helping professions', I feel strongly that people must be aware of their attitudes and values before they can be objective in a counseling situation. This is especially true when we begin to deal with the area of sex role stereotyping. Before any movement can be made, people must own up to their own biases and attitudes. Their values are not to be viewed in a moralistic light but rather with the idea that in order up be an effective counselor, it is resential to know from where one is coming. The counselor

or teacher can then, hopefully, be more open to hear what the student is saying and asking. It is difficult in a counseling situation to encourage a young women, for example, who has an interest and skill in welding to pursue this as a career when the counselor can only perceive women as being in the home and taken care of by her husband. My feeling is not one, of demanding that the counselors change their attitude of where women should be but rather know that the preference in their own personel like is that women belong in the home. When the counselors own their bias and accepts them for themselves, then they can remain open to effective counseling with the student and hopefully not feel the need to impose their own attitudes on the student.

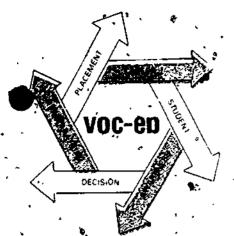

The acceptance by the counselors and administrators who were at this November in-service was very low as indicated by the questionnaire that was returned to Carl Arko. Carl did indicate to me, however, that there was a commitment for him to continue with this component. I was contacted by John Peterson and informed that we would have an hour time-block at the December 2nd in-service meeting.

On November 25th John and I met with Holly Greer, Women's Center Director; Judith Russell, Women's Center Counselor and Dr. Vicki Voegel, Counselor at Northern Michigan University's Counseling Center to plan the December program and to develop strategy for the rest of the in-service meetings.

On December 2nd when I arrived at the Holiday Inn in Marinette, I was informed that the agenda was filled and that there would be no time for the presentation that John and I had planned. Needless to say I was very upset. This was compounded since I never received an explaination or apology from any of the people involved with the planning.

I personally feel vertices ommitted to continuing this sex role stereotyping component of the Career Guidance Support Services Program. I recognize that this component is not being readily accepted by the counselors of the area. I feel, however, that in order for career education to be effective, the sex role barrier must be dealt with in an open and honest manner. I recognize that this is threatening and difficult for many people. For this reason, I think John and I are using temperment and honesty and are not pushing others to change their attitudes and values. We are, however, attempting to facilitate an atmosphere where we can explore the effects of perceiving people in males that have nothing todo with their abilities, interest and talents.

DELTA - SCHOOLCRAFT INTERMEDIATE SCHOOL DISTRICT

Gladstone Industrial Park 80x 70 Gladstone Michigan 49837 (Phone) 906 428 2347

January 26, 1976

Seople Helping People for the World of Work Ar. James Mahrt, Director Career Development Support Systems Project Michigan Department of Education Vocational-Technical Education Service P.O. Box 928 Lansing, Michigan 48904

Dear. Jim:

The elimination of sex role stereotyping is a long term process involving everyone with a role in education. The attitudes responsible for the continuance of sex role stereotyping must be confronted in education K-12, society, home, wtc. The problem, having grown to enormous proportions, must now be the responsibility of all concerned with education.

Career Education is prepared to deal with the problems of sexism in education simply by the definition of Career Education itself. I proprose this in viewing Career Education as the attitude of all involved in education to live a commitment of maximally preparing the individual for a life's role. Sex role stereotyping significantly contributes to the negation of this commitment by channeling individuals into careers traditionally viewed on the basis of the sex of the individual. The sex of the individual is and should be of little importance in the development of a career. The individual must be able to exercise the right to select a life's role regardless of the desire of the counselor, teacher, society, etc. to view the individual firet on the basis of sex.

So significant is the elimination of sex role stereotyping in education that Career Education will not fulfill its objectives until a reverse is realized. Without this attitude change, Career Education will be yet another trend in education that has not faithfully approached this problem in education today.

In the counselor workshops conducted in CEPD 4 & 5, the propose was to prepare area counselors in implementing the rocess Guide for Career Guidance. I was aware of the need for inservicing counselors regarding sexism in counseling

and asked for the time to address this problem at the wirkshops. In the ten hours that was assigned to the topic of sex role stereotyping in the eight workshop period, I was confident that preliminary attitude change could have resulted. The programs were to be presented by Mary Soper of the Women's Center at Northern Michigan University and myself. With the expertise the both of us have acquired reganding this problem, a successful delivery system was in the planning.

The counselors involved in the first and second workshops were not in agreement with our attitudes regarding sexism in education and could not justify the time being spent on the topic. This reaction can be expected of any population unaware of the problem itself. It was disappointing to find that the counselor reactions were coddled at the cost of discontinuing the programs Mary and I had developed. To present the problem of sexism in education to counselors and educators with sexist views is sure to create defensive reactions. It is at this point that the purposes of the program would have been obvious.

I urge that a program in eliminating sex role stereotypes be a significant part of the Career Education/Career Guidance delivery, system. The Soper Peterson Team enthusiastically offers their support and welcomes the opportunity of spending time with you developing the program.

Jim, please call on us at any time. Have a good day:

sincerely yours,

John W. Peterson, Consultant Career Guidance NUMBER:

The statements listed below describe attitudes toward the role of the woman in society which different people have. There are no right or wrong answers, only opinions. Please circle your choice according to whether you (A) Agree strongly, (B) Agree mildly, (C) Disagree mildly, or (D) Disagree strongly, with each statement.

Genesee Intermediate School District
Kalamazoo Intermediate School District
Kent Intermediate School District
Macomb Intermediate School District
Menominee Intermediate School
District
St. Joseph Intermediate School

District

MAJOR OBJECTIVES:

- Teachers in participating districts will design and implement career education activities into the existing curriculum by utilizing an infusion process.
- 2. Counselors in participating schools will design and implement career education activities in cooperation with teachers, independently and/or with other staff or community members.
- 3. Teachers, counselors and other appropriate staff members will participate in inservice programs, designed to increase their career development skills in organizing, facilitating and delivering career development outcomes to students.
- 4. Regional and local career education personnel will utilize needs assessment and goal-setting processes to identify comprehensive career education program goals.
- 5. Regional and local career education personnel will facilitate career education planning efforts through model planning efforts and supportive planning inservice.

PROJECT ACTIVITIES:

 To help teachers in participating districts design and implement career education activities that can be infused into the existing curriculum, local career education leaders will train teachers. to use a step-by-step curriculum development process that delivers both academic and career development content at the same time. *A workshop will be utilized to train teachers to use these materials.

- 2. To kelp counselors in participating districts design and implement career education activities, project personnel will use a process guide for organizing career guidance. This guide is currently under development by the Michigan Department of Education and will be pilot-tested with project personnel during August-November, 1975. An inservice workshop which will train local counselors to implement the guide will be held during August, 1975. Follow-up sessions to the workshop are planned.
- 3. Local counselors and teachers will increase their awareness and understanding of career education and increase their implementation skills by participating in training workshops and by consultant training in selected areas.
- 4. Local districts will utilize Michigan Department of Education process materials to develop a local needs assessment for career education. As part of this process local district steering and advisory committees will establish and prioritize career education goals.
- 5. Local districts will utilize local and state level materials to carry out planning for the organization and implementation of career education. In order to accomplish this, project leaders will develop a step-by-step process that local districts can use to complete their career education plans.

EVALUATIÓN:

- 1. Objective 1: Participating teachers will be pre-tested with a state level instrument and post-tested after completing the workshop. Further, records will be kept of the career education activities which are developed and actually implemented. Key evaluation variables include gain in concept knowledge, number of activities designed and number of activities tested.
- 2. Objective 2: Following an inservice workshop counselors will carry out specific process steps. The materials will be evaluated on the basis of how well counselors can follow the suggested procedures. Other significant staff members in the pilot test settings will be requested to rate counselors on the degrae to which they carry out suggested activities.
- 3. *Careen Education skills will be measured by achievement criterion referenced objectives, both in knowledge and demonstrated performance.
- 4. Attainment of career education goal development will be evidenced by adoption by local school boards, community groups and the professional staff association.

-3-

5. Attainment of planning objectives will be measured by the number of plans which are completed accurately and thoroughly and accepted by the Career Education Planning District.

COMMUNICATION:

Materials and procedures which are developed by individual project sites will be presented and shared at monthly project coordination sessions.

Other anticipated products of this project include model and completed local district career education plans, a process guide for career guidance, guidelines for organizing and implementing an occupational information system, completed planning outlines for career development activities and guidelines for organizing a regional support system for career education. These products available by June, 1976 may be obtained from the project director. A final evaluation report will also be shared with interested parties.

MICHIGAN STATE BOARD OF EDUCATION STATEMENT OF ASSURANCE OF COMPLIANCE WITH FEDERAL LAW

The Michigan State Board of Education hereby agrees that it will comply with Federal laws prohibiting discrimination and with all requirements imposed by or pursuant to regulations of the U.S. Department of Health. Education and Welfare Therefore it shall be the policy of the Michigan State Board of Education that no person on the basis of race, color. religion, national Origin or ancestry age, sex, or marital stafus shall be discriminated against, excluded from participation in, be denied the benefits: ol, or be otherwise, subjected to discrimination under any federally funded program or activity for which the Michigan State Board of Education is responsible or for which it receives federal financial assistance from the Department of Health, Education and Welfare. This policy of nondiscrimination shall also apply to otherwise qualified handicapped individuals

Foreword

As a result of Public Act 97, Career Education Planning Districts (CERDs) have been legalized and CEPD opordinators are assisting local school districts with their career education planning.

Several CEPDs throughout Michigan have received funds to experiment with the coordination of educational programs at the regional level. These projects have developed and tested strategies for helping local schools plan, implement, and evaluate their career education programs.

These strategies have been documented in this manual for use by all CEPDs; they represent suggestions and, if used, should be adopted or modified to meet local needs.

This PD manual can serve as a resource for CEPD personnel in their efforts to coordinate career education, staff development and promotional programs.

John W. Porter Superintendent of Public Instruction The editor gratefully acknowledges the time, effort and guidânce of the following persons:

Bruce Grow, Michigan Department of Education
Cas Heilman, Michigan State University
James Howard, Michigan Department of Education
Bill Liimakka, CEPD & Coordinator

glossary

career-

various life roles of Student, worker, family member, and citizen

career education— the delivering of skills to all students which will provide them with the ability to explore, understand, and perform in their various life roles while learn—ing, working, and living (The emphasis of career education is career development combined with career preparation, the academic and vocational training.)

career development-the part of a school program which helps individuals develop the knowledges, skills and attitudes necessary to plan, explore and establish life roles

CDSSP (career development support systems project)-funded projects to develop materials and support systems for career education particularly career development

career education advisory committee-a citizen/educator committee which recommends a district philosophy of career education and recommends goals for career education programming in the district

career education steering committee-an educator committee which submits position and goals statements to the board of education. Its major responsibility is to develop, monitor, implement and evaluate the effect of the locally approved career education plan.

CEPD (career education planning district)-a district formally established by Public Act 97 to increase communication, cooperation, and planning among member educational agencies, and to coordinate and promote career education

CEPD staff (formal)-those persons hired by an administrative unit to assist the CEPD coordinator in the regional planning, coordination and promotion of career education

CEPD staff (informal)-those persons identified by the CEPD coordinator to assist in the regional coordination of career education (i.e., local career education coordinator, local steering committees, community persons, volunteers, etc.)

career education team-includes administrators, teachers, counselors, media specialists, community persons, etc. The team may exist at the local, intermediate or D level.

It is involved in the planning, implementation and evaluation of career education.

CEPD functions— as discussed in this manual are, career education programming, staff development and promotion

curriculum management a structure developed for use by a local school district or intermediate school district to identify what is being done at each level of curriculum to pursue the career education goals of the school district

goal setting (needs assessment)-a technique for determining the career education needs of the students and setting goals to meet those needs

evaluation— the process of determining if the actions taken have achieved the stated goals of a school district.

Process evaluation determines the effectiveness of the process. Product evaluation determines if the student has learned what the goals stated, and to

what extent. Evaluation forms the basis for setting new goals.

qoals- clear statements of measurable outcomes

performance indicators, measurements of the attainment of goals

implementation— the program step which consists of actually using the techniques and strategies identified in the

planning for career education

pranning- program steps involving getting organized, assessing existing career education programs, setting goals and designing a curriculum management structure

program assessment-the process of assessing where a career education program is when compared with an operational career education system

promotion- the process of creating awarenesses and understandings of career education among target groups to develop support for an operational career education system

staff development-a program designed to increase the skills and knowledges of the members of the career education team

student assessment-the process of determining the student career education understandings and needs, as well as the results of career education efforts with students

CHAPTER I Introduction & Assumption Introduction

Public Act 97 of the Education Acts of 1974 legally established the Career Education Planning Districts as the agencies to promote, Coordinate and assist the local educational agencies in planning, implementing and evaluating career education programs.

the purpose

This is a manual to help the Career Education Planning District councils and coordinators meet the intent of the legislation.

based on experience

It is based upon the experiences of several developmental projects, and a spectrum of educators who are dealing with the demands of planning, implementing and evaluating career education in Michigan.

This is not a policy statement, but rather a selected collection of exemplary strategies and techniques that have been used in Michigan to get career education programs functioning.

The manual will address the roles and structures of CEPDs and the CEPD functions of assisting local school districts to implement, evaluate, inservice, and promote career education.

Much of the material in this manual is based, on the experiences of Career Development Support Systems Projects (CDSSPs). Six CDSSPs containing nine CEPDs have been experimenting with regional support programs for career education.

The CDSSPs are:

- CEPU 5 (Delta-Schoolcraft)
- 2. CEPDs 7 & 8 (Charlevoix, Emmet)
- CEPD 29 (Genesee)
- 4. CEPDs 35, 36 & 47 (Kalamazoo; Calhoun, Barry and Branch; and St. Joseph)
- 5. CEPD 40 (Macomb)
- 6. CEPD B2 (Kent)

During the fiscal year 1974-75 these projects were supported by funds from ESEA Title III and the Vocational Education Act, 1968 Amendments. For fiscal year 1975-76 the CDSSPs received funds from the U.S. Office of Education.

These projects addressed the following objectives:

- To identify the services which enable regional support and coordination of local career education efforts.
- -- To facilitate school district adoption of career development goals and objectives.

- To facilitate the use of the infusion process as a means of integrating career development objectives into the curriculum.
- -- To help school districts modify or develop career | guidance programs incorporating career development objectives.
- --- To develop a career education planning model for CEPDs and school districts.

This manual represents the results of innovative problem solving by the staffs and councils of the CDSSP sites and other CEPDs.

The Assumptions Before discussing the planning and implementation of career education there are some assumptions based on the experiences of the exemplary projects.

These assumptions represent some minimum requirements for establishing a favorable environment for career education.

monetary resources

Predictably, the first assumption is monetary resources. In most cases, money is not available without a commitment from the community. There are cases of state and federal funding. But these funds are generally of a temporary nature—aimed at demonstrating what can be accomplished and how it can be done. They are not intended to provide continuing program support. By utilizing techniques and strategies such as those developed by the projects and other CEPDs, career education can be planned and implemented in the face of stringent monetary limitations by utilizing the efforts of others.

staff resources

At least one person should be given CEPD level responsibility and authority for coordinating and developing focal career education personnel and programs.

All CEPDs have a coordinator. In some cases he or she is the administrator and staff rolled into one.

CEPD personnel are usually chosen for the abilities which allow them to establish contact with local districts, gain credibility and generally contribute to an atmosphere of cooperation. Exemplary project coordinators have stressed the need for personnel with the skills which enable them to promote the planning and implementation of career education.

Some CEPDs have a person assigned the full-time responsibility for assisting local agencies with career education programming. Others have additional staff--increasing the likelihood of personalized contact with local districts. It also frees the CEPD coordinator to meet administrative demands. The following diagram illustrates three different responses to personnel needs.

CEPD

CEPD "A"

one staff person assists CEPD coordinator

CEPD "C"

student population

of

17,000

 CEPD coordinator
 Works directly with local agencies to assist them in developing their staff functions community commitment

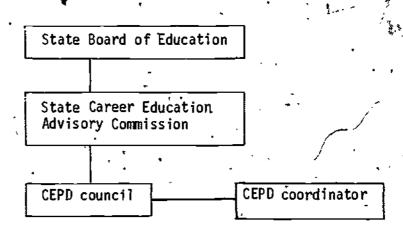

The next assumption addressed is the necessity for community commitment, which must exist if there is to be career education. But "community" is an imprecise term. It must be discussed on two levels.

The first is the decision-making level. Here, the commitment to career education is made by the local agency in consort with those who take an active role in the content and direction of education in that community. In Michigan, content and direction may come from school boards, local advisory committees, parent-teacher organizations or CEPD councils.

The second level refers to the contributions of expertise from the community-at-large. This resource often is overlooked, but it does exist. This kind of community commitment can emerge though as the result of the efforts of concerned CEPD staffs and local district staff, parents and local representatives of business, labor and industry. Teachers, students, businessmen, housewives, senior citizens, and other volunteers all can play a role in helping the CEPDs meet the needs of the local agency. A number of CEPD coordinators feel that too little emphasis, has been placed on this notion of community. It is advisable to evaluate community involvement in terms of human resources available to the CEPD--and how they can be utilized.

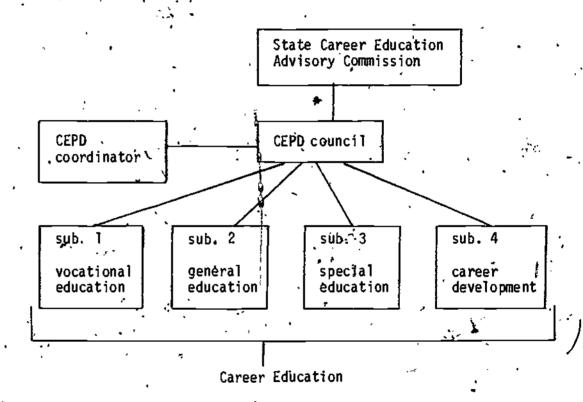

organizational structure

As described in Public Act 97, a beginning CEPD structure looks like this:

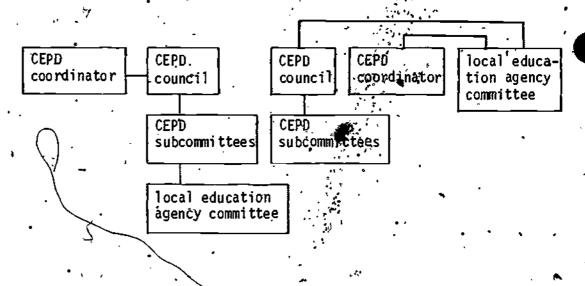

The boards, of education in the constituent intermediate school districts or other administrative units appoint the members of the CEPD councils, as well as the coordinator. It is the responsibility of the council to develop and approve a career education plan annually, based on the education plans submitted by the LEAs.

As mentioned in the Michigan Department of Education "Career Education Handbook for Implementation," a CEPD has choices regarding organizational structure. One approach features a subcommittee structure:

The CEPDs using a subcommittee structure often do so to give the CEPD council the benefit of detailed studies of program. It streamlines CEPD council actions, but also requires a firm time commitment from subcommittee members.

Another aspect of organizational structure is that of local agency input. In one case, the agencies are asked to make their input directly to the CEPD council. In another, the local agencies are asked to make input directly to the subcommittees:

To a great extent these structures are determined by the personnel and resources available and the traditional patterns of communication that have existed in the CEPD.

administrative support

Another program assumption involves administrative support. CEPD coordinators stress that administrative support can make or break a career education program even if all the preceding assumptions are met.

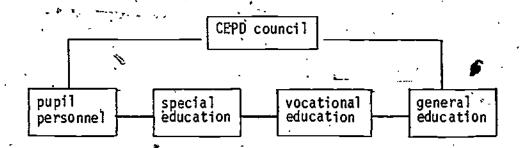

Direct access to the intermediate administrative decision-makers is a necessity.

In some situations, the CEPD coordinators have been "screened" from this access. Consequently, their ability to reach the decision-maker in the constituent intermediate or CEPD district was impaired.

Also, administrative support must come in other areas. Local administrators and community persons must support the efforts of the coordinator and the council. As will be discussed later, the coordinator shoulders much of the responsibility for establishing this support.

access to program areas

Along with administrative support, positive results depend on the members of the career education organization having access to all other CEPD program areas. For a person in say, the Special Education subcommittee, to plan effectively and make valuable recommendations to his or her council, a knowledge about the progress and programs of vocational education, general education and pupil personnel-services, is almost a necessity. It is important that CEPD coordinators establish communication lines to assure there is a system for communication among members of specific program areas.

With these assumptions of monetary resources, staff resources, community commitment, and organizational structure, administrative support, and access to program areas stated and defined the discussion can turn to the specifics of CEPD responsibilities.

CEPD Responsibility The CEPD's responsibilities occur on two levels: The first comes in meeting local needs. During the planning process, a local district may want to do a needs assessment or conduct an inservice program. Often the local district will ask CEPD personnel to provide assistance in meeting these needs.

The second level is a coordination function. In cases where the needs of several local agencies are similar, the coordinator may assume the responsibility of providing those services on a regional level. There is opportunity for regionally coordinated efforts in planning, resource utilization, staff development and promotion.

A key to a coordinator's success is what kind of "person" the coordinator is. The coordinator's most valuable tool is ocoperation and the ability to create it.

The manner varies in which coordinators deal with administrative demands and maintain personalized contact with local agencies.

In one case, the coordinator has skillfully managed a commitment from at least one volunteer in each local agency within his district. He coordinates their efforts. One of his techniques for insuring a close relationship between the CEPD and the local agencies is to meet regularly with his contact persons and deal with mutual concerns. Also, many of his contact persons are enthusiastic members of his CEPD council.

CEPD Counci, Activities As local agencies begin to develop yearly career education plans, the CEPD council becomes involved. Primarily it is the role of the council to make recommendations on the programs the local agencies propose. The CEPD council will-on the basis of local plans--design a CEPD plan which facilitates LEAs achieving their identified goals.

In addition, CEPD councils can engage in the following kinds of activities:

- -- assisting local districts in goal setting by promoting community and parent response to surveys
- -- developing promotional campaigns for all local media
- -- giving awareness presentations to local civic groups
- -- assisting in community resource assessment
- -- identifying and encouraging local staff whose programs reflect career education planning and implementation

Exemplary projects have developed techniques and strategies that can help CEPDs meet the needs of local agencies. In view of this, it might be possible to describe a third level of responsibility for councils and coordinators. That is the coordination level with other CEPDs. As mentioned earlier, other CEPDs should be considered for the wealth of experience they can provide your CEPD. The following chapters will concentrate on the specific functions CEPDs can perform.

getting organized

assessing program

setting goals

CEPD Manual

Chapter II

Career Education Programming

managing curriculum

Identifying strategies

evaluating program

.Career Education Programming Career education programming is a relatively complex process. As a career education program develops, those responsible for that programming must concurrently become prepared to deal with additional refinements of the process.

Therefore programming and staff development must be coordinated. As each step in programming takes place, local and CEPD staffs must have the awarenesses that facilitate effective programming steps.

Figure "A" breaks down programming into three stages and six steps. At the same time, it shows who must know and be committed to what to complete those programming steps and stages.

The three stages of career education are: planning, implementation and evaluation. They are the responsibility of the local educational agencies. The responsibility of the CEPD and its staff is to assist in those efforts. The primary responsibilities of CEPDs are to assist local school districts in planning, implementing and evaluating career education and to coordinate staff development and promotional programs.

In figure "A" the first column contains the process steps and stages. The second column shows who must be involved; and the third column shows what awarenesses those persons must have for the program steps to be realized.

CEPD career education programming begins with the CEPD coordinator. The coordinator's first step is to identify the CEPD staff which may consist of persons hired by the ISD to coordinate career education activities, or it may be the local career education coordinator. The second is to establish a working relationship with the CEPD council. Before the first process step in programming, "getting organized," can take place, the coordinator must insure that the staff and council have fundamental awarenesses of the philosophy and organization of career education in Michigan.

With the above as a base, the CEPD staff can begin to offer assistance in delivering those fundamental awarenesses to the local career education committees and staff by coordinating inservice programs/

When these groups have become aware of some of the implications of career education in Michigan and have made a commitment to the concept the initial organizational structure for career education has been initiated.

Getting Organized

This initia? organization sets the stage for one last step in formal organization--organizing a citizen's advisory committee. See the MOE "Handbook for implementation," Section III "Organizing for Career Education," for a discussion of organizing the local advisory committee, and a discussion of its constituency.

This organizational beginning establishes a framework for initiating the rest of the planning process steps.

Program Planning In figure "A" the first stage of career education programming is planning. The first step in planning as discussed previously is "getting organized." Once CEPD and local organizing has begun, these groups are ready to initiate the second step of programming which is assessing the cager education program:

Assessing the existing career education program The CEPD can be useful in assisting the local educational agencies in determining how their career education program is developing. To do this, local agencies might employ an assessment tool for analyzing their existing career education programs. *

Participants doing the assessment will become familiar with program indicators—the benchmarks of developing career education programs. They will also become familiar with the scope and scale of career education its operational form.

The following strategy is designed as a program assessment tool. It should be regarded as an example. Keep in mind that each of the examples illustrated in this manual can be adapted to local approaches to problem-solving.

assessment tool

This strategy is called "Career Education Program Assessment."

staff development outcomes The general staff development outcomes resulting from a program assessment involve three things. The first is, an awareness of the assessment took which describes what a comprehensive career education program looks like. The second, as a result of doing the assessment, is an awareness among the staff of how a comprehensive career education program develops; the third is the establishment of program goals to be accomplished during the next assessment period, annually, or long-range (i.e., five years).

CAREER EDUCATION PROGRAM ASSESSMENT*

Note: It is important to remember that this is a <u>suggested</u> assessment instrument. A CEPD or LEA may revise, adapts or modify this instrument in any way that makes it more useful; or a more appropriate instrument may be identified and used.

<u>Pérsons Responsible</u>: It is suggested that a person be identified who will be responsible for completing this assessment. Possibilities are the LEA Career Education Coordinator or Chairperson of LEA Steering Committee. Remember: <u>do not</u> collect this information until it is specified how this information can be useful in making decisions.

<u>Directions</u> for <u>Completing</u> this Assessment

This assessment is designed to help a local school district analyze how it is progressing in terms of comprehensive career education program development.

It is composed of seven stages of program development with several indications of progress specified at each stage.

The person responsible will complete the assessment by checking the appropriate box for each program indicator:

Has Been
Completed Making Not Not
(include date) Progress Begun Applicable Comments

Example:

He or she should also write comments where appropriate to indicate level of progress toward the program indicator.

Other persons or groups can be involved where appropriate to ensure an accurate description of progress toward indicators.

This instrument should be administered periodically. Assessment periods may be monthly or quarterly. Regular assessment keeps the Career Education Coordinator and Steering Committee updated on new developments and progress made toward program indicators.

* draft CE Program Assessment jointly developed by CEPDs 35, 36, 47 and MDE personnel

220

. 219

Following each assessment period, the Steering Committee should review the data, establish priorities and identify indicators to work on during the next assessment period.

This tool is-useful for both annual and long range planning. A district can choose a few program indicators to work on during each assessment period (established by the district). And it can lay out a series of program indicators to work on over a long period of time () to 5 years).

- The career education coordinator and the steering committee should familiarize themselves with these program indicators and process steps before involving staff in assessing.
- Staff development is an element that runs throughout the assessment and coincides with each process step along the way.
- It is possible to complete some program indicators from Step 1, some from Step II, and some from Step V simultaneously. The <u>order</u> of the program indicators does not mean this is the way every district should or will progress. It is just an indication of how it can happen.
- The instrument is long and can be modified by a CEPD or a local district.
- This tool can also be used to begin articulation between programs and projects within a CEPD or local district.

SOME SUGGESTIONS RELATIVE TO ESTABLISHING

A COMMITTEE STRUCTURE*

On Section III Organizing for career education pages 7 through 12; of the Michigan Department of Education's <u>Career Education Handbook for Implementation</u>, several helpful suggestions are offered relative to organizing a career education committee structure. Basically these suggestions call for the establishment of two committees authorized and answerable to the administration and board of education. The two kinds of committees are: (1) a Steering or "Doing" Committee; and (2) a Citizen's Advisory Committee.

The <u>Steering Committee</u> is usually composed of board members, administrators, K-12 teachers, counselors and possibly representatives from the community if desired. This Committee has three principal functions:

- Developing a local district career education plan.
- 2. Monitoring the implementation of the plan.
- 3. Evaluating the effectiveness of the plan and recommending the 'subsequent year's plan.

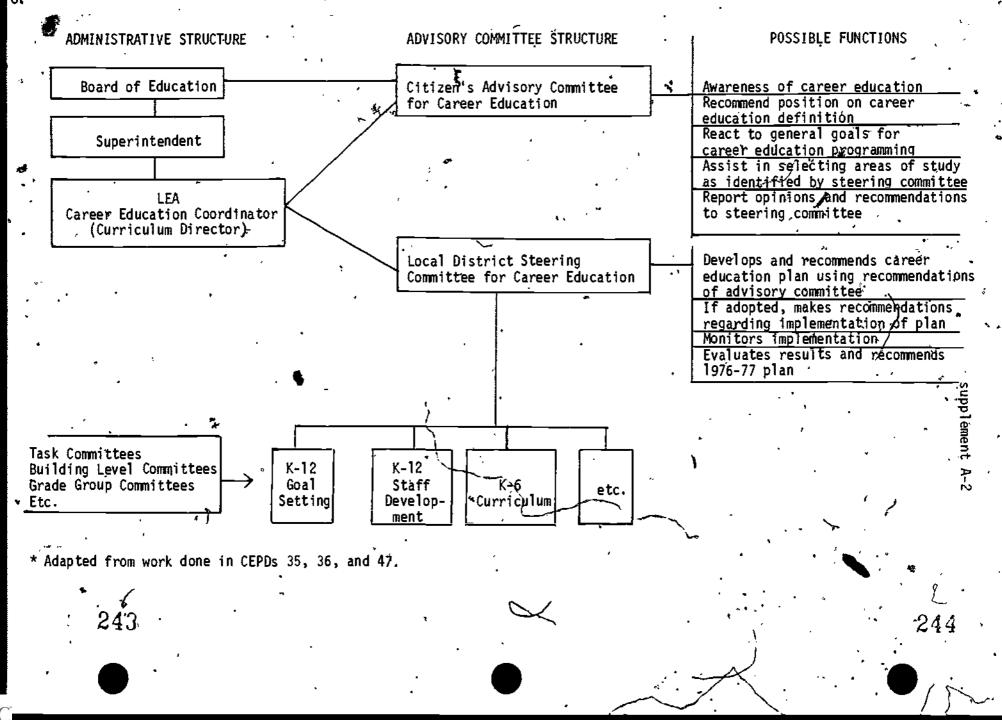

The <u>Citizen's Advisory Committee</u> is usually a larger group in numbers and composition and includes both lay citizens and educators, preferably in equal numbers. It works in partnership with the Steering Committee and assists it with the major efforts of the plan. Its functions could include:

- Becoming aware of the elements in a comprehensive career education program.
- Recommending general goals for the local district career education program.
- 3. Having its members serve on various task committee to implement the plan approved by the Board of Education.
- 4. Recommending ways of expanding the partnership between school and community.
- 5. Reporting opinions and recommendations to the Steering Committee.

Some districts may find it expedient to utilize one overall Career Education Committee to perform the functions to the two-committee structure noted above, providing the membership of the combined committee is composed of the recommended membership of both committees, including community representatives

^{*} Adapted from work done in CEPD 35, 36, and 47.

One Example

USING THE COMMITTEE STRUCTURE TO ORGANIZE, IMPLEMENT, AND EVALUATE CAREER EDUCATION PROGRAMMING, SOME SAMPLE SUGGESTIONS FOLLOW:

ORGANIZING TO DEVELOP A CAREER EDUCATION PLAN

The Steering Committee should:

- 1. Suggest proposals to assist Citizen's Advisory Committee become aware of career education.
- *Submit for Board action a position on the meaning of career education using the Citizen's Advisory Committee recommendations.
- 3. Develop and submit for Board action an annual career education plan.

The Citizen's Advisory Committee might:

- 1. Become aware of career education.
- 2. Recommend a position on the meaning of career education for the district.
- Recommend goals for career education programming in the district.

IMPLEMENTING A LOCAL DISTRICT CAREER EDUCATION PLAN

The Steering Committee should:

- Develop and submit for Board action a set of local district career education learner goals.
- 2. Recommend "initial sets" of learner performance objectives for career development and career preparation outcomes related to local district goals.
- 3. Recommend an awareness program for specified publics and monitor its implementation.
- Identify ways of implementing career education and recommend insocial plans to accomplish this.

 If approved, make the implementation of the plans.

The Citizen's Advisory Committee might:

- Receive periodic reports on the ress of career education implementation
- 2. Study various issues such as:
 - A. Expanding school community career.
 - B. Review resource materials.
 - C. Identifying approaches to evaluate local district career education efforts.

supplement A-3

243

3. Have its committee members serve on volunteer task committees of the Steering Committee if requested.

EVALUATING THE EFFECTIVENESS OF THE PLAN

The Steering .Committee should:

- 1. Review the results of implementation efforts relative to the current annual career education plan.
- 2. Review opinions and recommendations of the Citizen's Advisory Committee.
- 3. Develop and submit for Board action the career education plan for the upcoming school year.

The Citizen's Advisory Committee might:

- 1. Suggest to the Steering Committee ways to evaluate the program efforts.
- 2. Assess the results of efforts for current year.
- 3. Offer recommendations to the Steering Committee relative to priorities to consider for upcoming year.

ROLE OF THE CAREER EDUCATION STEERING COMMITTEE

I. Purpose:

The organization of a career education steering committee is vitally important to the efforts of the career education coordinator in initiating action in the local school district. It serves as a decision making and planning agent for the development of strategies to implement career education. Active, interested members; meeting on a continuing basis, can bring together the thinking of all segments of the school system, report to their peers on progress and problems, and demonstrate support by implementing career education in the classroom.

- II. Organizational Considerations (See Section III, Organizing for Career Education, Handbook for Implementation):
 - 1. Leadership
 - 2. Size and structure
 - 3. Composition
 - 4.-Purpose and responsibility

III. Some Possible Tasks to Consider:

- 1. Become aware of career education
- 2. Develop a common definition of career education consistent with the state definition of career education.
- 3. Develop a' position paper
- 4. Determine resources- time, money, materials, consultants, etc.
- 5. Get top level commitment
- 6. Keep Board and community informed
- 7. Determine staff inservice needs
- 8. Produce a career education newsletter
- 9. Conduct a needs assessment
- Organize a goal-setting process
- Plan a series of presentations to develop understanding system-wide
- 12. Evaluate present instructional and guidance programs
- 13. Develop à community resource guide
- 14. Develop an annual local plan :
- 15. Seek funding support for advancement of career education programs

EDUCATIONAL PHILOSOPHY

THE HOMER COMMUNITY SCHOOLS' BOARD OF EDUCATION:*

Recognizes the importance of continually seeking ways to insure the achievement of academic, personal, and social skills needed by our youth and, therefore, supports the following position:

Education in the Homer Community Schools will assist students in gaining a positive self concept as it relates to the fulfillment of life rotes of family member, worker, and citizen.

It will be the responsibility of ALL - educators, the community and its resources - to make basic subject matter relevant to students on a daily basis in gaining understanding about themselves and their world, both now and in the future.

2.jij

* Adapted from work done in CEPDs 35, 36, and 47.

PRESENTING A FORMAL POSITION STATEMENT ON THE MEANING OF CAREER EDUCATION TO THE LOCAL BOARD OF EDUCATION*

Developing a formal conceptual position on the meaning of career education is considered a most essential step. Because career education has "evolved" in its meaning over the past few years, several interpretations may exist within each local district. Several different interpretations can conceivably lead to different positions on the direction of the curriculum and thus create difficulty in overall program planning.

As a means of establishing a central focus for career education efforts within the district, it is recommended the steering committee:

SUGGESTED ACTIVITIES

- L Have its formal position statement reviewed by other local district publics such as the administration, a committee of teachers, counselors, and other staff, a lay group, etc.
- Review feedback from groups reviewing the position statement and make changes, if appropriate.
- Present the revised position statement for board review and action.

(Note: If it is not possible to have the statement reviewed prior to submitting for board action, the committee may wish to submit a position statement on the evolving meaning of career education for the district and note the position statement may require changing as it is studied further by local district publics.)

RESOURCE

Steering Committee Position Statement

* Adapted from work done in CEPDs 35, 36, and 47.

ESTABLISHING A PROFESSIONAL DEVELOPMENT PROGRAM FOR_CAREER EDUCATION

RECOMMENDATIONS FOR LOCAL DISTRICTS*

In stating that career education is an approach designed to build on the Common Goals of Michigan Education, the local Career Education Steering Committee acknowledges that the concepts, methods, and structure enhanced by career education are promising curriculum development tools for improving local and intermediate district educational programs.

The key to the continuation and expansion of the career education approach rests with a solid and continuing Professional Development Program. Such a program should include a focus on:

- A. Attitudes and understandings of local district boards, administrative, teacher, counselor, and advisory groups.
- B. Models for planning and implementing education efforts.
- C. Methods used to plan and implement instruction.
- D. Methods used to evaluate efforts and improve educational programs. P

PROFESSIONAL DEVELOPMENT RECOMMENDATIONS FOR LOCAL DISTRICT CONSIDERATION

Career education related staff development programs should focus on these key local district publics:

- A. Local District Board of Education
- B. Administrative Team
- C. Local District Career Education Advisory Committee
- D. Teachers, Counselors, and Support Service Personnel
- E. Parents and the Community.

'RECOMMENDATION #1

The Steering Committee recommends that each public above become aware of:

- A. The implications of Public Act 97 and local district career education planning.
- B. The meaning of career education and its relationship to the total curriculum effort as well as to daily instructional efforts.

^{*} Adapted from work done in CEPDs 35, 36, and 47.

- C. A curriculum development structure complementary to career education efforts which is adaptable to local district structures.
- D. The models, processes, and support systems used in planning and implementing career education, including:
 - 1. Suggested Guides and Management Plans
 - 2. Infusion Process
 - 3. Exploration Program
 - .4. Career Guidance Process
 - 5. Occupational Information Systems (such as VIEW)
 - 6. Resource Guide
 - 7. Others

RECOMMENDATION #2

Planning and implementing local district career education plans will be based primarily on two factors:

- A. Each public identifying its specific role in fulfilling the requirements of the plan.
- B. Each public gaining the necessary information and skills needed to achieve the role expected.

This Committee recommends that appropriate professional development programs be identified and implemented which will:

- A. Allow each public to identify its role.
- B. Allow each public to gain the necessary information and skills to achieve the role expected of it.
- C. Allow each public to evaluate its efforts in achieving the role expected of it.

RECOMMENDED STAFF BEHAVIORS TO CONSIDER WHEN DEVELOPING PROFESSIONAL DEVELOPMENT PROGRAMS*

The following behaviors are recommended as the foundation of any local district professional development programs:

1. Helping Relationships

Staff should be able to demonstrate a willingness to help each other in planning, implementing, and improving classroom instruction, guidance services, and administrative management.

2. Human Growth and Development

Staff should be knowledgeable of the process of human growth and development and use it as the basis for planning a school curriculum which is realistic, flexible, yet sequential.

3. Goals and Objectives

Administrators should be able to develop goals and objectives for the major achievements they desire. Teachers, counselors, and support personnel should be able to develop goals and objectives for the critical behaviors they wish learners to achieve in their classrooms.

4. Systematic Procedure for Managing Programs and Instruction

Staff should be able to platthe management of their programs or instruction by systematically dealing with three questions:

- A. What is it we want to achieve?
- B. What is necessary to achieve it?
- C. How and when will we know we have achieved it?

5. Relating Instruction to Real Life

Staff should be able to relate the content and methods of their programs and classes to people who use them and how they use them in a wide variety of roles, including: 'earning a living, being part of a family, serving in a citizen or social role, and within leisure settings.

255

^{*} Adapted from work done in CEPDs 35, 36, and 47.

6. Approaches for Implementing Career Education

Staff should become knowledgeable of the models, approaches, and support systems available for implementing career education:

- A. A structure for organizing the overall Curriculum.

7. Make Application of Home, School, and Community Resources

Staff should be able to identify and make application of home, school, and community resources in planning and implementing instruction, and other related school programs.

ELEMENTS OF A

COMPREHENSIVE CAREER EDUCATION PROGRAM*

A comprehensive Career Education Program should include the following ingredients: \(\)

- A district definition of career education which is adopted and supported by local administrators, teachers, counselors, students, community, and the board of education.
- 2. A set of local district learner goals for career education.
- A set of K-12 career education performance objectives linked to the local district goals established.
- 4. The inclusion of the following <u>elements or strategies</u> to assist <u>ALL</u> staff in the district to help students achieve what has been established in #1 and #2 above:
 - A. Formation of a local district <u>Career Education Team</u> (administrators, teachers, counselors, community, students) a subgroup or career education steering committee can plan, promote and monitor career education efforts.
 - B. Formation of an Advisory Committee to suggest directions for the career education program.
 - C. Identification and implementation of <u>Instructional</u> program which utilizes infusion and exploration.
 - D. Identification and implementation of comprehensive career <u>Guidance</u> program.
 - E. <u>Professional Development</u> of all staff regarding awareness and implementation of the career education concept.
 - F. Placement as a program to assist students to plan during and when leaving school.
 - G. <u>Evaluation</u> as a component to assess where we are at all times in terms of our goals.
 - H. <u>Media</u> as a support system to several of the above elements mentioned.
 - I. Occupational Information as a support system to several of the above elements mentioned.

^{*} Adapted from work done in CEPOs 35, 36, and 47.

ESTABLISHING THE ROLE OF PUBLICS IN CAREER EDUCATION PLANS

RECOMMENDATION FOR LOCAL EDUCATION AGENCIES*

Local districts will be expected to develop and submit career education plans which have been formally approved by their Local Boards of Education. In organizing to develop and implement local career education plans, suggestions are given regarding the roles of the following Local District Publics:

- I. Local District Board of Education
 - A. Adopts an annual local district career education plan.
 - B. Monitors progress of the plan as needed.
 - C. Commits local district monies and human resources to the implementation of the career education plan adopted as needed.
 - D. Annually reviews the effectiveness of the adopted plan and adopts a comprehensive career education plan for the next school year.

II. Superintendent:

- A. Is directly responsible to the Board of Education for the development and implementation of the career education plan.
- B. May choose to delegate the responsibility for the development and possible implementation of the plan to another staff member(s).
- C. May organize a career education steering committee to assist in the planning, implementation, and evaluation of the career education plan.
- D. Budgets funds for career education.
- E. Approves of the plan and the necessary aspects included in it such as inservice programming.

III. Local Career Education Coordinator:

- A. Reports directly to the superintendent on the progress and status of the career education plan including its development and implementation.
- B. Is responsible for the coordination of all major prerequisite tasks involved in preparing the career education plan, including:
 - Determination of the objectives squght;
 - Identification of the activities needed to achieve the objectives sought;

. .

- Assignment of responsibilities among specific staff to insure the completion of the objectives;
- 4. Identification of a timeline for completing activities;
- 5. Identification of cost allocation to implement the plan;
- Evaluation of the plan's effectiveness;
- Identification of recommendations to be included in the plan for the coming year; and
- 8. Monitoring the implementation of the plan.
- C. Works directly with the principal and staff of each building involved in the development and possible implementation of the plan in matters of curriculum revision; procurement of supportant ive services and resources, and inservice programming.
- IV. K-12 Career Education Steering Committée:
 - A. Makes recommendations regarding:
 - 1. The meaning of career education for the district and its relationship to the existing curriculum effort;
 - The activities to be initiated with local school publics in assisting them to understand and accept career education;
 - A career education plan including arreview of the goals and objectives sought;
 - .4. The evaluation and assessment of the effectiveness of the plan in achieving the objectives sought; and
 - ్ ్ 5. Changes for each subsequent year.
- V. Building Principals:
 - A. Assists in the overall development of the plan.
 - B. Are responsible for the implementation of the career education plan within their buildings:
 - C. Provides an environment which promotes curriculum change and reinfo<u>rces</u> staff efforts to implement the plan.

- VI. Local District Teachers and Counselofs &
 - A. Participate in programs designed to assist them to better understand and use the concepts of career education.
 - B. Participate in:
 - Identifying goals, exit competencies, and objectives;
 - 2. Learning how to use a planning and implementation model to assist in the achievement of the goals and objectives;
 - Developing and implementing career education lessons in the classroom and in the career guidance program;
 - Identifying how teachers and counselors can work together to deliver career education concepts and;
 - 5. Suggesting changes for subsequent year plan.
- VII. Citizen's Advisory Committee
 - A. Makes recommendations regarding:
 - 1 a definition of career education
 - 2. goals for career education programming
 - 3. expanding school and community career education efforts
 - 4. resource materials
 - 5. evaluations strategies
 - 6. priorities for annual planning

ESTABLISHING A SET OF LOCAL DISTRICT LEARNER GOALS WHICH INCLUDE CAREER DEVELOPMENT AND CAREER PREPARATION GOALS*

A LAUNDRY LIST OF SUGGESTED STEPS*

IDENTIFY WHAT YOU WANT TO ACHIEVE

- 1. What will your goals look like? What minimal things will they include? Establish these points of reference.
- 2. How will you use the goals once established? Establish these points of reference.
- 3. Who will have to approve of these goals if they are to be useful to the local district? Establish these points of reference.

IDENTIFY YOUR PRESENT STATUS TO THE ABOVE

- 1. Does your district already have a set of goals? Check this out.
- 2. Do the district goals need to be revised to include the minimum things you've established, or do you need to establish a set of local district learner goals? Review several goal setting processes to determine which will get you the kind of goals you want.
- Do you have access to resource help (time and money)? Relate these limitations to the goal setting processes you'd like to use.
- 4. Have you determined who will be involved in the process? Your resources will likely rimit this part of your planning. School district philosophy regarding such matters may also suggest limitations (keeping things inside the school). Check this out.
- 5. Is there some established procedure through the chain of command regarding gaining approval for the goals you may establish? Check this out.
- 6. Who will actually oversee the establishment of the goals? Will it be your steering committee, or a subcommittee, or the curriculum committee? Identify who would be the logical group.

^{*} Adapted from work done in CEPDs 35, 36, and 47.

DEVELOP AND IMPLEMENT A PLANTO/ESTABLISH GOALS

- 1. Decide upon the appropriate goal setting process and identify the number of process steps involved.
- 2. Decide who will be finvolved in the process (board members, administration, teachers, support personnel, parents, students, community).
- 3. Decide specifically how the publics will be involved (mail surveys, have small group meetings, other approaches).
- 4. Establish timelines for each specific step in the process and detail the planning needed to complete each step (identify where and how the step will be accomplished, reserve rooms, notify) people, print materials, send out surveys, compile results).
- 5. Identify the methods and content to be included in communication on this task. Identify the publics who will receive the communications.
- 6. Double check to see you have the resources (time and money) to complete the plan (if necessary review the plan with your chief administrator and gain his or her approval).
- 7. Amplement the plan.

TAKING THE NEXT STEPS

- Obtain approval for the goals established by the above process from the local district board of education or other local district decisionmaking body.
- 2. Go back to your planned outline regarding "how you will use the goals and determine your next steps of action."
- Communicate to all school staff the goals that have been established, how they'can be used, possibly examples showing how they can be used, and the next steps in the process.

ESTABLISHING STARTER LISTS OF CAREER EDUCATION PERFORMANCE OBJECTIVES

Some Helpful Hints*

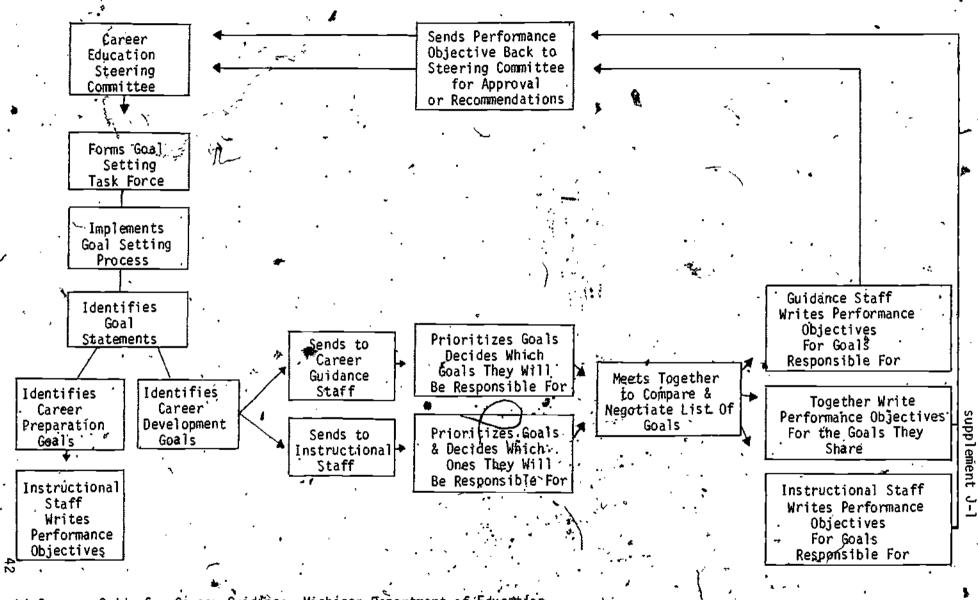

- * Identify what the career education performance objectives will consist of and how they will be used by staff and students.
- * Gather available information on career education performance objectives.

 Some sources could include:

-- Local District developed objectives.

- -- MDE Task Commission Objectives for academic areas.
- -- MDE Career Development Performance Indicators.
- -- Vocational Education Objectives.
- -- Others as identified.
- Identify ways to develop the Starter Lists. Some could include:
 - -- Career Education Stearing Committee takes on the assignment.
 - -- Use sub-committees of the existing Curriculum Council.
 - -- Form Special Teacher and/or Administrator Task Committees.
 - -- Establish a system for gathering information from teachers who implement career education instruction through development of goals and objectives.
 - -- Have staff from one building develop objectives.
 - -- Others as identified.
- * Concentrate on a specific area of emphasis such as:
 - -- Limiting the grade level areas considered.
 - -- Limiting the subject matter areas considered.
 - -- Limiting the career development areas considered.
 - .--. Including only those teachers and administrators volunteering for the activity.
- Assess the level of understanding of the group involved regarding the "writing" of performance objectives.
- Bring the group of staff to be involved together and:
 - -- Determine what will be achieved. What areas will be considered for starter list development. How many objectives will be identified or written.
 - -- Determine the approaches to be used to accomplish the task such as group work meetings, individual effort, or other approaches.
 - -- Determine the format to be used in writing the dijectives.
 - -- Determine what additional inservice help might be needed such as , "how to write performance objectives."
 - -- Determine how the completed starter lists will be used.
 - -- Determine the timelines for monitoring progress and insuring completion of the task.
- Periodically check with involved staff, giving encouragement, support and getting additional information, materials, etc. as requested so job can be completed and on time.
- Be sure to thank involved staff when job is completed and see they are given visibility in the District for their efforts.
- * Adapted, from work done in CEPDs 35, 36, and 47.

FLOW CHART FOR DETERMINING GOAL RESPONSIBILITY

* Process Guide for Career Guidance, Michigan Department of Education

264

265

Setting goals

Step III of the program assessment involves setting goals. This is a local school district responsibility and should be a prerequisite to developing an educational program. Career education is based on a concept of analyzing what educators do in terms of what students need. One important way of finding out what students need is to ask staff, students, parents and community persons—the users of the educational system should have a voice in determining the educational goals of the district.

It is important to remember that once goals are determined, local districts should next consider the development of marner outcomes and the design of implementation programs.

sample instruments Sample instruments for setting goals are presented in this section.

A goal setting process can do several things:

- 1. It can identify those student outcomes which participants consider important.
- It can identify what groups should be contributing to the achievement of those goals: the home, school, and/or community.
- It can identify how well these groups are presently doing in helping students achieve goals.

Based on the results of goal setting processes, a district can begin to look at its program offerings and curriculum to see if it does or can achieve the goals identified by the district as being important. Weaknesses can be identified and plans established for making necessary modifications.

The staff development implications for goal setting are that the local career education coordinators and committees be familiar with goal setting processes, that they understand how to formulate and utilize career education goals and performance indicators.

The following samples, Supplements K-P, are goal setting processes that can be modified to suit the needs of various local agencies.

staff adevelopment

SAMPLE GOAL SETTING FORMS

supplement K: MDE Goal Setting Process: Revised survey form (see Hand-book For Implementation, Resource Section--Goal Setting for directions, data collecting and tabulation procedures. These suggested procedures will be useful no matter which instrument you decide to use.)

supplement L: CEPD 5 Goal Setting Process

supplement M: River City Goal Setting Process: was devised by The American College Testing Program. Added items (such as #61-67) make it a more comprehensive survey of student needs.

supplement N: Godwin Heights: Needs Assessment

supplement 0: Forest Hills Needs Assessment

supplement P: Kent City Community Schools Needs Assessment

CEPD 5
Goal Setting Process
Supplement L

supplement L-1.

Dear

The Board of Education needs your help:

Last year your school began a program of annual planning of school services. The purpose of the program is to insure that every student graduating from our school is prepared to take the next step toward a good and happy life - whether that be continuing school or beginning work.

To do this we need to know what kind of learning you think is important and how well children are learning. Your answers to the questions on the next few pages will help us in our planning.

We will keep you informed regarding both our progress in planning and the results of this survey.

273

DIRECTIONS

LISTED ON THE NEXT FOUR PAGES ARE SIXTEEN (16) VERY GENERAL GOALS OR REASONS FOR SCHOOL, PLEASE ANSWER THE THREE OR FOUR QUESTIONS LISTED AFTER EACH GOAL.

SEE EXAMPLE BELOW:

Step 1

READ THE GOAL

The GOAL, or Purpose of School, is what children and students should learn at school.

GOAL

DEVELOP A DESIRE TO LEARN

			WHERE SHOULD CHILDREN LEARN THIS?	HOW WELL ARE	NING?			\$ 6		<u> </u>
X	•	.81	Should want to learh now			,	X		•	Ĭ
	X	8.2	Should want to continue to learn	in the future.		*		,	X	
	X	8.3	Learns good study habits.					X	واراج	ì.

Step 3

WE AGREE WITH YOU

Both the School and the Home help children learn.

But, for each learning listed, we need your opinion as to who is most responsible.

Step 2

READ THIS

Listed here are things children learn to reach the GOAL Step 4

·· · PLEASE

In your opinion, how Well area children learning in each area listed?

1	<u> 60/</u>	CHILDREN SHOULD LE	EARN HOW TO BE A GOOD	Supplement L-	-3

to accompany CEPD 5 Goal Setting/,
Needs Assessment

question 1 What is the purpose of the survey?

answer

1.1 The community and parents are now asking as never before for schools to justify their programs and the high costs needed to keep them operating.

Most of the concern or criticism is leveled at:

- a) increasingly high costs
- b) low achievement (basic skills)
- c) students lack of preparation for the real world and everyday life
- 1.2 In some ways this survey is a response to criticism.
 - a) We can go on the defensive and say, "We are doing a good job, people just don't know it!"

or

We can take action to find out exactly where we are doing a good job in preparing our young people for life after graduation and, equally important, where we can stand some improvement.

question 2 Is criticism of schools the only reason for this survey?

answer

2.1 no

2.2 As educators, we must be alert to the demands that a changing society makes upon our children.

We live in a period of rapid change, where advances in science and technology have created a world vastly different from the one we knew only a decade ago.

However, our schools, like other institutions, can often lag behind the pace of the changing times and fail to keep in step with the realities of the world around them.

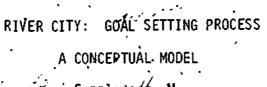

We want to be ready to modify our approach and change directions whenever necessary, so that what our schools teach is relevant to the needs of today's students. To

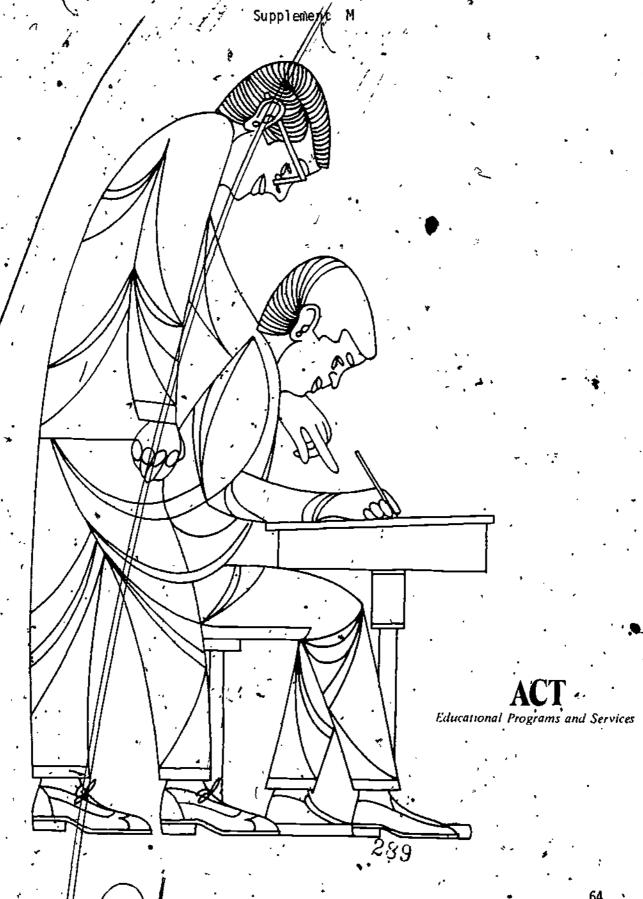

do this we need help from the parents and 'A community we serve. This survey is a first step.

- 2.3 We must not be afraid to ask ourselves and the community, parents and people we serve:
 - d) Does everything we offer help children fulfill their potentials or are some aspects of our program designed merely to perpetuate the system?
 - b) How well is four school preparing children to lead useful, productive and satisfying lives?
 - c) Is education completed with graduation or are we responsible for stimulating a thirst for knowlege and self-improvement that will lead to continuous learning throughout adult life?
 - d) Should schools help children learn about themselves, about careers, how to makes decisions and plans?
 - e) We are certain that only by offering programs that equip students with the knowleges, skills and attitudes necessary for lifelong growth can we justify our roles as educators.

question 3. What will be the result of this survey?

- answer
- 3.1 One of the ways for us to insure that what we offer is really meeting student needs and is consistent with what parents and the community expect is to periodically determine what our school's goals are and how well we are meeting them.
- 3.2 This survey will tell whether our school services and curriculum need modification and in what direction. As soon as the data is tallied we will begin preparing our annual plan for the next school year. Included in the plan will be activities designed to make whatever adjustments the survey results indicate.
- 3.3 This survey will help us identify the strengths and weaknesses of our educational program as seen by a broad spectrum of community users students, former students, parents, employers and other residents of the district and will enable us to set new goals and adjust existing programs for the total system.

NEEDS ASSESSMENT SURVEY

To plan school and community activities that will serve you, we need your help!

Please respond to each item by indicating first how important the need is to you and second how well that need is being met, not just by the guidance counseler but by anyone--your parents, teachers, friends, etc.

Name _	_	•
,	 -	
Grade		

Directions

In the columns on the left of the double line, mark an X in the box which best describes how important the need is to you.

In the columns on the right of the double line, mark an X in the box which best describes how well that need is being met for you.

Mark a response in the left column and in the right column for each of the 67 needs listed.

Data Tabulation

Several techniques could be employed to analyze the student assessment data. At River City it was determined that two questions needed to be addressed:

- What are the strongest needs of the students at River City High School?
- 2. How adequately are the "high need" areas currently being met?

To answer these two questions, it was necessary to determine the relative's trength of each item and category and to establish how well a need or category of needs was being met for students indicating a "strong" or "moderate" strength of need.

To obtain these data, it was necessary to tally the responses for each item.

EXAMPLE

SATISFACTION RESPONSES NEED RESPONSES .Need Need Partially Not-TOTAL . Need ITEM Strong Moderate Weak No Being Being Being Need 🤭 Need-Need Need 81 Met Met Met 46 HI HI HI HI HIK HILLH mmMMMM m m m m m $\mathcal{H}\mathcal{H}$ 1. 11 MM

These data were then transferred to a summary sheet.

In the example above, of the 81 students responding to Item 1, 20 indicated a "strong" need, 26 indicated a "moderate" need, 30 a "weak" need, and 5 "no need". Of the 46 students who indicated they had a "strong" or "moderate" need, 10 indicated it was being "met", 26 indicated it was being "partially met," and 10 indicated it was "not being met."

These data provide the basis for computing a "Need Index" (NI) and a "Not Met Index" (NMI) for each item and category. The Need Index is calculated by dividing the number of students who indicated a "strong" or "moderate"

need by the total number of responses $(NI = \frac{S+M}{N})$. The NI indicated the period centage of the total group who gave a "strong" or "moderate" need response

The Not Met Index (NMI) is calculated by dividing the number of students who gave a "partially met" or "not met" response by the total number of satisfaction responses $NMI = \frac{PMet + NMet}{N}$.

Establishing Priorities

The Need Index (NI) and the Not Met Index (NMI) are essential data for establishing priorities. Several techniques can be used to convert these index numbers to a priority classification. One method would be to make a direct comparison and, on an a priori basis, establish a ranking for each item within a category and for each category. When the NI and NMI have been computed for each item and category, it is a relatively simple matter to determine the areas that need to be assigned a high priority.

	_ 	_					,					•
	NEI	ED RESP	Onses	/NI	* .			SAT	ISFACTION (S+M)/N		S E S	
Item No.	Strong Need	Moder- ate Need	Weak Need	No Need	N	(s+m). N	Item No.	Need Being Met	Need Partially Being Met	Need Not 'Being Met	N	<u>pm+not</u> n
1	20	26	-30) 0 5	81	46 81 ₹.57	1	10	26	10 •	46	$\frac{36}{46} = .78$
2	37	27	18	08	90	64 = . 71 90	2	20	22	22	64	44 ±.69
3	3 5	· 26	15 *	10	86	$\frac{61}{86} = .71$	3	15	20	.26	61	$\frac{46}{61} = .75$
\ \ \ 4 \ \	10	12	35 •	37 ,	94	$\frac{22}{94} = .23$	4	11	07	04	22	11 22 = 50
5	34	25	15	10	841	59 84 ≥.70	5	20	. 09	,30	59	39 59 = .66
Cat.	136	116	X	X	435	252 435 = 58	Cat.	X	84	92	252	176 252 = .69

According to the preceding data, the Need Index for Item 3 tells us that 71 percent of the junior class felt they needed to develop more self-confidence. The Not Met Index indicates that of those who felt Item 3 was a strong or moderate need, 75 percent felt the need was being partially met or not met. This item would obviously have a high need priority on an idem-by-item comparison.

The technique used to determine category ices is basically the same as that used to determine item indices. The thod used is as follows:

METHOD OF DETERMINING A NEED INDEX FOR EACH CATEGORY

Determine the sum of the strong and moderate responses for the category.

Determine the sum of all need responses for the category.

Divide the sum of the strong and moderate need responses by the sum of all need responses.

METHOD OF DETERMINING A NOT MET INDEX FOR EACH CATEGORY

Determine the sum of "partially met," and "not met" responses for the category.

Determine the sum of all satisfaction responses for the category.

Divide the sum of "partially met" and "not met" responses by the sum of all satisfaction responses. This percentage is the Category Not Met Index.

Looking again at the sample Data Tabulation and Index Worksheet tells us that 71 percent of the junior class felt a strong or moderate need to understand and accept self (Item 2). The Category Not Met Index indicates that 69 percent of those felt that need was being "partially met" or "not met." This category would also be given a high priority classification.

Another technique to establish priorities would be to locate the NI number and NMI number in a quadrant as illustrated below.

,	, ·	NOT MET INDEX	. ,
	Low) High
High	(High-Low) MODERATE PRIOF	. :	(High-High) HIGH PRIORITY
NEED INDEX			
	· (Low-Lo	w)	(Low-High)
	LOW PRIC	PRITY	MODERATE PRIORITY
Low	,		

River City elected to use .70 as the cutting line for the cell divisions. However, these divisional lines could be arbitrarily determined at different points.

In the illustration, Item 1, having a Need Index of .57 and a Not Met Index of .78, has been located in the Low-High cell which would classify it as a moderate priority item. Items 2 and 5 are located in the High-Low cell and would also be given a moderate priority rating. Item 3, located in the High-High cell, would be given a high priority, and Item 4, located in the Low-Low cell, would be given a low priority classification. Category l would rank as a low priority. Using the quadrant technique, each item and category could thus be classified as low, moderate, or high priority.

≱GODWIN HEIGHTS*

STUDENT NEEDS SURVEY

We would like your assistance in an important project to help improve our school's program. As a first step in our project we are asking students, parents and staff to complete the questionnaire below. The questionnaire is aimed at finding out what you see as being needed in our program. Dne of the primary aspects of a good program is that it responds to the needs of young people. When we know these needs, we will insofar as possible, make every attempt to meet these needs. Your assistance is important to the success of this project. Thank you.

Check dned Male Female Circle your grade 9 1D 11 12

NEEDS ASSESSMENT

PURPOSE:

Assessing needs is one way for school personnel to systematically evaluate whether school programs need modifying and, if so, the results of an assessment suggest possible directions for program modifications.

Doing a needs assessment is a first step toward designing or redesigning school programs to fit the needs of the persons served by the school or school district.

WHO WILL DO ONE?

Appropriate individuals are asked to respond to specific questions designed to provide data in terms of strengths and weaknesses of the school program.

The following is a list of groups who will be asked to respond to this needs assessment:

Citizens curriculum committee.

- Ž. Other citizens.
- 3. Building administrators.
- 4. Faculty.
- 5. Central office administrators.
- 6. High school siyydents.
- 7. Board members

USE OF DATA:

The information gathered through this needs assessment will be used to develop a set of reports. The Board of Education and administrators will use the reports in establishing the direction the district should take.

* adapted from work done in CEPD 32

ERIC Full feat Provided by ERIC

Designing a curriculum management structure

Once goals for a district are determined it is the administrators', teachers' and counselors' responsibility to begin articulating what is happening at each level and in each program to facilitate students meeting each goal. This process can be called curriculum management.

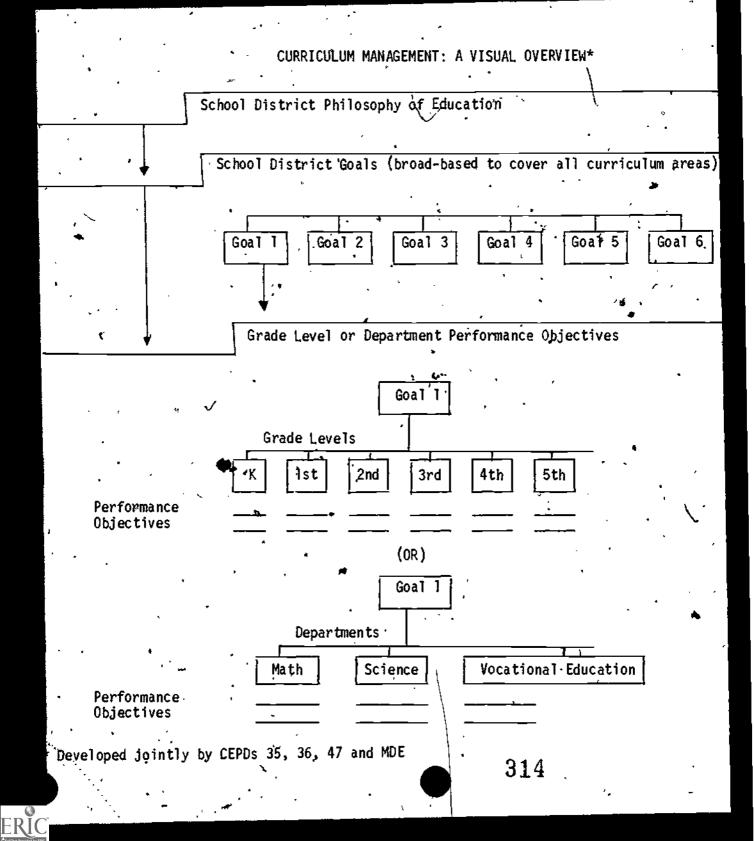

Curriculum management is a strategy for combining a district's philosophy, goals, objectives and activities into a single structure which helps identify what each staff member and program area is taking responsibility for.

The structure also allows staffs to identify weaknesses in the program and focus resources and planning (or inservice) time toward curriculum improvement.

one `strategy.

The following management structure provides one strategy. It has been included in this manual to assist those CEPDs that are receiving requests for curriculum management assistance from local districts.

participant outcomes The staff development implications are that the local-career education committees are prepared to utilize the curriculum management structure to identify the strengths and weaknesses of their career education program. As weaknesses are identified, local committees and staff can begin identifying strategies, resources, or inservice programs to improve their curriculum offerings.

GURRICULUM MANAGEMENT STRUCTURE

This Curriculum Management Structure consists of a series of worksheets which suggest one way of organizing curriculum. It is based on the local district's philosophy of education and the local district's set of learner goals. It is suggested that before a LEA is ready to complete a curriculum management structure, it has 1) stated a philosophy and 2) established a set of learner goals.

Person(s) responsible: The task of planning and completing this Curriculum Management Structure can be handled by the LEA Career Education Coordinator or curriculum specialist and the Steering Committee in conjunction with the local curriculum committee.

Purpose: The purpose of a curriculum management structure is to determine if what is being done at each level is adequate to accomplish local school district goals. The outcome is the identification of curriculum areas which need change. In working to change curruculum, it is important to work cooperatively with the existing curriculum structure within the school.

Directions for Completing the Sample Curriculum Management Structure*

	Activity	Person(s) Responsible	Examples
Step 1	Complete Part 1 of Worksheet 1: School District Philosophy. (Approved by LEA School Board)	LEA Career Education Coordinator	See Sample Worksheet 1 p. 94
Step 2	Complete Part 2 of Worksheet 1: School District Learner Goals. (Approved by LEA School Board)	LEA Career Education Coordinator	See-Sample Worksheet 1 p. 95
Step 3 🕮	Discuss completed Worksheet I and rest of Curriculum Management Structure with LEA • Career Education or curriculum committee.	LEA Coordinator	
Ştep 4	Make a decision about how to divide staff to identify performance objectives for each district learner goal: - by grade level (Grade Level P.I. Matrix) - by department (Department P.I. Matrix)	LEA Career Education Committee	See Matrix - Option A See Matrix - Option B
*,	- combination of the two (i.e., by grade level K-6 and by department 7-12).		pp. 96 & 97

*Remember: This is a <u>sample</u> curriculum management structure meant only as a point of departure for local school districts struggling to design their own.

ERIC

93

Step 5 Look at the suggested matrices and worksheets and revise or adapt these to reflect local school district circumstances.

See Matrix - Option A See Matrix - Option B and Worksheets pp. 94-101

Step 6

Devise a strategy for completing the Worksheets (one for each box on the matrix). Possible strategies to be utilized:

- a workshop or inservice day
- several staff planning periods
- a Curniculum Management Structure Night sponsored by the school board.

LEA Career Education Committee

See Worksheet for Matrix 4 Option A and Worksheet for Matrix - Option B and see completed Sample

Worksheets
pp. 98-101

Step 7 Comp

Complete one Worksheet for each box on the Matrix.

As each worksheet is completed by staff, a check is made in the appropriate box on the appropriate matrix.

LEA Teachers and Counselors

LEA Coordinator

Step 9

Step 8

Those boxes in the matrix <u>not</u> checked indicate where curriculum development is needed. Plan is devised for developing curriculum in those areas.

LEA Career Education Committee

Upon completing this Curriculum Management Structure, there may be some questions raised for the LEA Career Education Committee to deal with:

1) Do the material resources in the school relate to school district goals and aid staff in meeting their objectives?

2) Do the graduation requirements reflect district goals and objectives?.

3) Does the district need a more relevant set of exit competencies for students?

4) . Is the district making use of its community resources?

A next stage of curriculum management would be to utilize the concept and skills of infusion to identify how district goals can be incorporated into each subject matter/department area and to examine how two or more goals may be delivered together.

CURRICULUM MANAGEMENT STRUCTURE: AN EXAMPLE

Part 1

School District Philosophy (approved by LEA school board w/cooperation of department heads)

The Board of Education of the ______ School District recognized that the major role of our school system is to prepare our students to become contributing members of our changing society. We believe that:
- every individual has worth and dignity; he or she is unique and learns in relation to his or her uniqueness and has the right to educational opportunity in order to reach his or her potential.
- our school program should maintain a practical balance between the development of individual capabilities and the acquisition of skills and values necessary to successful living with others.

Our aim is to provide, within the limits of a sound fiscal program, the best educational and enrichment opportunities for both children and adults in accordance with the felt needs of the community.

To acquire and apply interpersonal skills.	lst Grade P.I.	before and after. Make a class list of how students help others.
	For the individual to identify four situations in which he or site both listens and responds.	Over a period of a week, have each student keep a diary of times he or she listens and responds. Discuss similarities and differences of individual diaries. Have each student observe and keep an anecdotal
*	2nd Grade P.I.	record on another student (times student listens and times he or she responds.) Have students reverse observer and observed roles and discuss records taken.
	For the individual to list four non- verbal ways to respond.	Discuss non-verbal communication. List ways of responding non-verbally. Have students write what each way listed means to him or her. Discuss similarities and differences of group results.
	3rd Grade P.I. For the individual to identify three situations in which he or she has initiated conversation.	Discuss initiating behavior and how to initiate a conversation. Have class form dyads. Have each dyad choose and interview topic and practice interviewing each other. Each student identifies and interviews
333		three persons not in the class and reports results and feelings about initiating a

Given the results of a curriculum management structure; a local school district can begin looking at program areas to determine if and where changes should be made.

Components of a career education program The following is a list of program components, all of which can enhance a career education program.

- 1. Instruction (Infusion)
- Career Exploration
- 3. Career Guidance
- 4. Occupational Information System
- 5. Placement
- Resources (Commercial and Community)

Each of these strategies can be utilized to help students achieve career education outcomes.

Each process requires staff development and a great deal of planning time. Therefore, LEA committees and coordinators, should focus on just one (or at the most, two) strategies at a time. This will provide those members of the staff who are participating in the planning and modifying of the strategy the attention and help they will need to succeed.

These strategies are not sequential; one does not have to do infusion before career exploration, etc. Neither are they seperate—a career exploration unit may be implemented as part of the instruction program. The components are discussed separately only for the purpose of clarity and amplification.

To choose which strategy to develop or modify, an LEA may refer to:

- 1) its Program Assessment (Step 2 of this planning process)
- 2) its Curriculum Management Structure (i.e., if the curriculum weaknesses were in district goals that dealt with career planning and employability skills, perhaps the LEA should consider initiating a placement program)
- 3) a staff assessment is there a group which is enthusiastic and has asked for help in improving their program? (i.e., if the Junior High staff is excited and would like to initiate something new, the LEA Coordinator and Committee may assist them in getting a career exploration program started.

select one or two

how to select a strategy The remainder of this section will take each strategy and discuss it in terms of:

- what it is
- how it can help
- where you can get more information.

Instruction

The core of the school program, as it exists and as it is envisioned, is the instructional program. The major emphasis of the existing instructional program is career preparation (math, reading, science, industrial arts, etc.). As educators begin looking at career development as a critical part of the school curriculum, it becomes apparent that the instructional program possesses considerable potential for aiding in the delivery of this content.

School districts are being encouraged to take actions necessary to insure that their instructional programs become effective delivery systems for both career preparation and career development content. One technique which is being experimented with to accomplish this is called the infusion process.

infusion process

This process places the teacher in the role of curriculum developer. It involves, for example, taking a subject like measurement and having a carpenter come into the classroom and explain how he or she uses measurement in family and leisure roles as well as on the job. He or she may also demonstrate measuring items and, in the process, actually teach a math lesson on measurement. In this way, measurement begins to take on meaning for the student.

The infusion process can assist an instructional program by:

- making the subject matter more interesting, and
- relating skills to real life situations.

Key factors in the successful implementation of this process are the quality of the inservice program designed to do it and the quality and quantity of resources available to teachers as they learn and apply infusion skills.

Materials which have been developed to assist educators in learning and applying the infusion process are:

- "Career Education Workshop Implementor Handbook," an inservice design for learning how to do infusion.
- "Ideas for Activities: Instruction," a collection of ideas which illustrate how to infuse career development into the existing curriculum.

- "Career Education Resource Guide" an analysis of commercial materials in terms of their appropriateness and usefulness.
- 4. "Career Education/Special Education Manual" (being field tested) is a workshop designed for special education teachers interested in utilizing the infusion process in their instruction. It also contains support materials (Ideas for Activities) for use in applying the infusion process. It will be available in the future.

Career Exploration

Career Exploration is a vehicle which enables teachers and counselors to help students gain insight into the relationship between the knowledge and skills they study and the knowledge and skills required for their intended present and future life roles.

It may occur as part of regular, existing classes, as new and specialized courses, or a combination of both. It gives students an opportunity to carry their exploration of various life roles out of the classroom into the community.

Career exploration is also a means of taking advantage of the vast reservoir of community resources which should play a part in the education of our youth. For too long the potential of most of the community has been ignored or forgotten.

Materials have been and are being developed to assist educators in developing and initiating an exploration program:

- 1. Exploration Guide, Section V of the "Handbook for Implementation" explains how to plan and implement an exploration program:
- 2. An inservice package for exploration is being developed.
- Identifying and Utilizing Community Resources, is an optional module in the "Career Education Workshop Implementor Handbook."

 "Career Education Resource Guide" describes materials which would be appropriate for use in an exploration program.

Career Guidance Career development content is being recognized as the basis for a career guidance program. To expand the guidance activities presently found in the school into a career guidance program which reaches all students, role changes are required. Counselors will become more effective in delivering career development outcomes by working directly with groups of students and to impact student outcomes indirectly by working with teachers, parents and community persons

New strategies and programs which are likely to become a part of the school curriculum will rely on the development of a team of teachers and counselors. Two programs which would benefit from this team responsibility are a career exploration program and a placement and follow-up program. Both of these programs involve community involvement and coordination of resources, and will depend on the cooperative efforts of counselors and teachers.

As counselors begin designing a career guidance program and specifying student outcomes for their program, administrators and teachers must support and facilitate this change. As counselors are rapidly learning, change is impossible without administrative support.

Counselors are also realizing that aspects of their role in career guidance (i.e., working with groups of students, facilitating value clarification, helping students learn a decision making and planning model) will require staff development.

Materials are rapidly becoming available which will assist counselors in establishing a career guidance program:

- tested—and will be available in future.

 This guide contains suggestions and supporting materials for counselors trying to assess their roles and design career guidance programs.
- "Ideas for Activities: Guidance" is a collection of ideas for a facilitator (counselor or teacher) to use in helping students achieve career development outcomes.
- 3: "Expanding the Cooperative Efforts Between Counselors' and Teachers" is an optional module in the Career Education Workshop Implementor Handbook.

- Infusion for Counselors is Module 2 of the "Career Education Implementor Handbook" and describes how counselors can develop their activities around caråer development outcomes.
- AIR (American Institutes of Research) is developing a series of career guidance skill building modules which will be available in the future.

Occupational Information System

The main goal of an occupational information system is to develop and maintain accurate, current and comprehensive occupation information for dissemination to institutions and organizations whose responsibility it is to meet the career development needs of students.

An occupational information system is a basic component of an exploration, career guidance and placement program. Michigan is fortunate to have several occupational information delivery systems, ranging in sophistication from a microfiche-based occupational information retrieval system to computer. Some of these existing systems are:

- VIEW (Vital Information for Education and Work) is currently operating in a majority of Michigan's public secondary schools and community colleges. It is a career information system which utilizes the medium of microfiche. Its major components
 - occupàtional scripts
 - educational and training information
 - cross-reference indexes
 - suggestions for implementation
 - sound filmstrip
 - an Exploration Handbook
 - inservice program
 - microbile reader or reader-printer
 - news letter
- ICPD (Instant Career Program Directory) uses a WATS. line delivery system to convey accurate and current enrollment information on post-secondary programs. The major components are:
 - WATS line system
 - program directory
 - daily log
 - · program information report
 - advjsory committee

There are three basic components of a good occupational system: information development, information delivery, and an organizational structure to accomplish the delivery of the information. By design, these systems make provisions for students to:

- expand their self-awareness

identify personal values

- expand their awareness of the world of work, training and education
- draw upon personal values in considering careers
- increase the number of desirable and realistic alternátives
- .take advantage of guidance and counseling. assis.tance
- learn techniques of narrowing to identify suitable careers
- develop and refine decision-making skills plan and prepare for career entry
- develop short and long-range placement strategies

As a result of the Occupational Information System grant to the Michigan Department of Education, the following materials are being developed to assist local schools in estab-. lishing a career information system:

- An overview document on occupational information systems to be included as part of Section V, "Handbook for Implementation."
- Updated, accurate occupational information.
- An inservice package for staff designated with the. responsibility of establishing a career information system.

For more information on VIEW, ICPD or MOIS, contact:

MOIS Director Box 928 - Vocational-Technical Education Lansing, MI 48904 (517) 373-0815

Placement and follow-up Without a successful effort to help individuals prepare for and effect a transition from school to the non-school community, much of the prior effort may go unused. Placement programs have as their purpose to prepare students for and assist them in making the transition from school to non-school life.

An efficient and effective placement program will help the school create a more meaningful environment for students and staff through:

- building identification with student career goals:
- strengthening ties between education and career goals
- providing information on curriculum strength and weaknesses
- bridging the gap between school and employment or further education
- l helping in career decision-making and career planning.

Recent pilot placement projects operating in comprehensive high schools, area vocational centers and community colleges have demonstrated that school-based programs which systematically focus on placement can effectively help students find and enter adult work roles.

which will assist schools in designing a placement program:

- Placement Guide in Section V, "Handbook for Implementation" identifies the basic components of a placement program and describes how to design one.
- 2. Plans for developing a training package for placement personnel are being considered and, if funds become available, such a package would be developed.

For further information, contact:

Placement Consultant
Box 928 - Vocational-Technical Education
Lansing, MI 48904

Commercially produced books, kits, packages etc. can add to an instructional, career guidance, career information, exploration, or placement program. What educators need is some way to evaluate the tremendous amount of commercially produced materials now on the market. The Career Education

Resources: Community and Commercial

341

Resource Guide was developed for the purpose of having.

teachers and counselors evaluate resources as to their appropriateness and effectiveness; those which were considered good or excellent by the teachers and counselors were then categorized under the career development components (self awareness, career awareness, decision-making, and career planning and placement). This guide has been disseminated one to every school in Michigan.

A career resource center is one outstanding way to organize career resources. This center can house occupational information systems, exploration kits or units, a community resource file, etc. and can become a truly active center offering student interest testing, exploration experiences, guidance and placement services.

An initial step toward establishing a career resource center fuld be to plan and conduct a district and/or build resource inventory.

Formore information about establishing a career resource center contact:

Career Development Unit MDE Sox 928 Lansing, MI 48904 (517) 373-3370

Community resources are an integral part of the instructional program in career education, the exploration program, the guidance program, and the placement program. Another way to utilize the community in the development of a career education program is to involve them on advisory committees. In order to make effective use of an advisory committee, the local school district should develop a plan which includes a purpose and goals and objectives for the committee.

One goal of an advisory committee could be to plan and conduct a community resource survey. Community resources could be identified to:

- participate as resource persons in the classroom'
- volunteer as classroom aids .
- staff the career resource center
- be possible field trip sites
- help organize exploration experiences
- identify job openings
- help plan and implement class projects

Community resources are probably the most unused resource of our educational system today. General Motors, the U.S. Chamber of Commerce, the Michigan Chamber of Commerce and many other organizations are writing position papers on career education and are beginning to get involved with the education of students. As educators, we must think of ways to use these resources and facilitate this involvement.

Several techniques have been utilized to identify community resources. A survey questionnaire distributed to community persons, representatives of business, professionals, labor, and industry has produced favorable results. Following are examples of forms which have been used.

Materials which will assist in organizing community resources are:

- Identifying and Utilizing Community Resources, an optional module in the "Career Education Workshop Implementor Handbook."
- A Guide for Effective Use of Advisory Committees.

Another type of resource is facility utilization. A document titled "Guidelines for Planning Career Education Facilities" is being developed as a part of the Handbook for Implementation and will soon be available. For more information contact:

Office of Career Education Box 420 Michigan Department of Education Lansing, MI 48902

Evaluation is a necessary component of career education programming. It is a continuous process which provides evidence enabling the education system to make rational and meaningful decisions about curriculum and program offerings.

Evaluation is defined as <u>a process of identifying</u>, <u>collecting</u>, <u>analyzing and interpreting information for the purpose of making decisions</u>.

Educational evaluation has four major purposes:

- to determine whether or not established objectives were achieved
- to determine why objectives were achieved or not achieved
- to provide cost analysis data that will enable educators to compare the efficiency of alternative educational strategies
- to provide recommendations to administrators and faculty regarding modification, expansions or continuation of objectives or strategies

The key to effective evaluation is the statement of objectives—the expected or desired outcomes to be achieved. The clearly stated objective should include at least the following points:

- specification of the individuals that will perform
- specification of the performance or behavior that will be demonstrated
- specification of the level of accomplishment that will be accepted as evidence of performance

Product evaluation measures the attainment of student outcomes can form the basis for process evaluation. If a student can perform according to the objectives established for a program, the process by which the student acquired the ability can be assumed effective.

Evaluating the Career Education Program

`Why ∕Évaluate

Key to Effective Evaluation

Product

evaluation

Therefore if the student has only partially mastered the stated objectives, the process used to deliver the outcomes should be examined and perhaps altered.

Process evaluation Process evaluation measures the relative effectiveness of the methods or procedures used to reach identified outcomes. For example, one may use individual counseling, small group instruction or programmed learning approaches to teach individuals decision making skills. The aim of process evaluation is to measure which of these methods is most effective in meeting identified outcomes.

The Levels

CEPD Level There are two levels of evaluation a CEPD should address. The first is evaluating its own program at the CEPD level. The second is assisting local school districts in evaluating their programs. This chapter will present some general approaches to both levels of evaluation.

A CEPD should design a plan to evaluate the objectives of its Annual CEPD Plan, which may include:

Э

- -- coordination of local, school district programming (planning, 複頁lementing and evaluating)
- coordination of local school district staff development programs.
- coordination of promotional campaigns

CEPD Evaluation At the CEPD_level, the staff should assess annually the objectives specified on its career education plan. An example of a CEPD objective is:

Objective 1: The CEPD shall conduct a promotional program to encourage school and community participation in career education activities.

Activities: -- conduct a career education "kick-off" workshop

- report monthly progress in a newsletter to local districts
- develop and disseminate career education
 materials *

346

Criteria for Success -

- evaluation of the "kick off" workshop
- list of participants
- survey of perceived effectiveness of promotional program with target audience
- logs of requests for materials and evidence of requests filled
- logs of consultant visits to locals upon request

The objectives of the annual CEPD plan should reflect the CEPD functions—assisting local schools to plan, implement and evaluate, develop staff and promote career education. These objectives should be specified in terms of activities the CEPD staff will undertake and the criteria by which they will be judged for effectiveness.

CEPDs can evaluate both product (the services they provide) and process (the methods and techniques they use to coordinate local career education programs).

Because'the CEPD is a coordinating unit, it is not directly responsible for student outcomes; this differentiates the CEPD's evaluation design from that of a local school district.

The actual planning, implementing and evaluation of programs takes place at the local level. LEA staff are responsible for student outcomes (product) and program outcomes (process).

Evaluating LEA objectives

LEA

Level

An LEA evaluation plan may include:

- 1. objectives of the annual LEA career education plan
- Quals and objectives identified as a result of the career education program assessment
- goals and objectives (by program area) identified as a result of designing a curriculum management structure

LEA Annual . Plan The local school district specifies objectives annually in its career education plan. Examples of objectives are:

- to establish, a set of learner goals for career education
- to establish a set of performance objectives for career
- to plan and conduct inservice to create an awareness and understanding of career education

For each objective, the LEA outlines activities it will conduct and specifies criteria to judge successes.

Evaluation of these activities should be continuous so modifications can be made in the objectives or processes if necessary.

LEA . career education program assessment

The Career Education Program Assessment also can be used as an evaluation tool. After completing the program assessment periodically, the LEA selects program indicators as goals to be achieved before the next assessment period. This process helps insure progress in pursuit of goals while providing periodic evaluation.

LEA curriculum management structure

As a result of designing a curriculum management structure, the LEA identifies strong and weak program areas. An outcome of curriculum management is knowing who is taking responsibility for what.

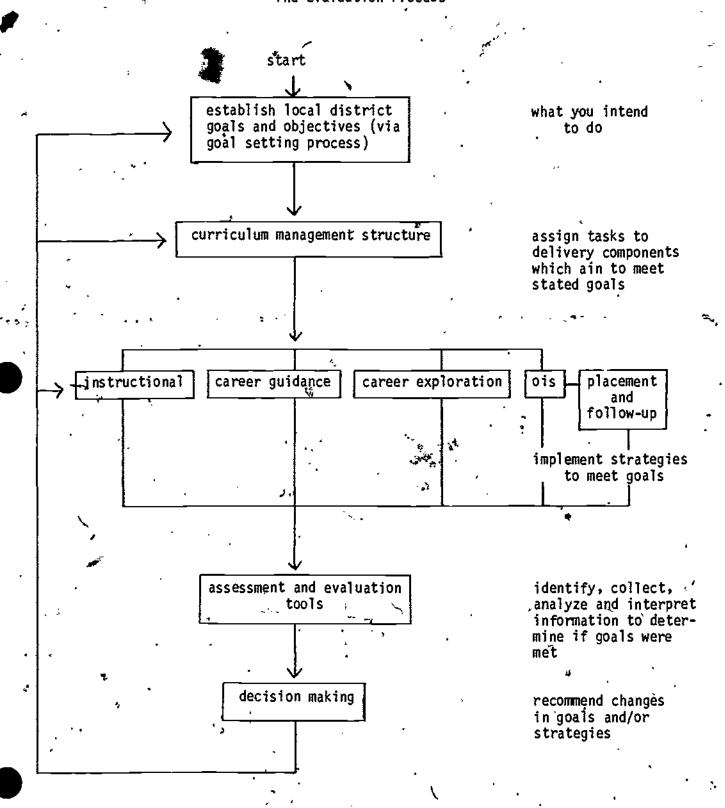

Evaluating Program Delivery Strategies In the previous section, several strategies were identified as techniques for delivering career development:

- instruction
- career exploration
- career guidance
- 0IS
- placement and follow-up

Each of these program areas identified what student outcomes (product) it will be responsible for and specifies which techniques and resources will be utilized (process). This LEA evaluation process by program area shown in figure B.

figure B

The Evaluation Process

As the diagram indicates, each program specifies which goals and objectives it will take responsibility for. Therefore, the persons involved can evaluate how well the program accomplished what it set out to do.

Instructional program, evaluation

Instructional program evaluation is based on stated goals and objectives. The product is the student outcome. It is a measure of whether or not the student achieved the goal and to what degree.

All instructional programs should have identified goals and objectives which are stated in measurable student outcomes.

Any lesson plan or other instructional guide, regardless of form, should include evaluation. One suggested approach is the curpiculum worksheet. The following example is an abbreviated curriculum worksheet. The purpose of this worksheet is to assist teachers in specifying objectives for instruction and a plan for evaluating that instruction.

Curriculum worksheets should address themselves to the number of students achieving goals within an acceptable range of proficiency. For those who cannot, the teacher can adopt remedial approaches.

Curriculum Worksheet
(short form)

goal statement

subject matter learner outcomes career development learner outcomes

implementation steps	resources

	implementation steps

evaluation

35í (

career exploration program evaluation The product evaluation of career exploration is the measurement of student outcomes for each career exploration unit of activity. The process evaluation concerns itself with the procedure or technique used to deliver experiences to the students (i.e., resource persons, simulation, role playing). As with all program areas, the evaluation depends entirely upon the clear statement of measurable student outcomes and a plan for evaluating whether or not the outcomes were attained.

career guidance program evaluation In accordance with the evaluation model (figure B) career guidance evaluation begins with the clear statement of goals and objectives.

Once they have been identified, the guidance and counseling staff can begin specifying techniques, activities, resources and target groups.

One format for the statement of goals, learner outcomes, an implementation schedule and evaluation is supplement R, the Career Guidance Planning Sheet.

Supplements S, T, and U are data collection forms. When complete they provide the raw material for evaluating process and product outcomes.

Supplement S'is a student evaluation form.

Supplement T is a summary of student evaluations.

Supplement U is a summary of student and facilitator evaluations. It also asks the facilitator to specify:

- who the evaluation results will be communicated to

and what use will be made of the data.

These supplements are offered as examples. Users are encouraged to identify other evaluation instruments and tools which may prove more effective or better suited to their delivery programs.

occupational information system evaluation

An occupational information system is a component of the instruction, career guidance, career exploration, and placement and follow-up, programs.

As such it provides the user with current, valid infor-. mation on occupations and post-secondary training programs... This information is most effective when used by students in making decisions.

An occupational information system can be evaluated on two levels.

- 1) process evaluation involves collecting the following data:
 - Is the information accessible to the instructional, exploration, guidance and placement programs?
 - Do the students know how to use the system?
 - Do teachers and counselors know how to use the
 - Is, the information accurate and current?
 - Is it used?
- product evaluation involves collecting data on the skill and knowledge gains of students using the system. The skills and knowledges delivered by an occupational information system would include career development performance measures in the areas of;
 - :- career awareness
 - decision making
 - career planning

The evaluation design of the occupational information system is based on the objectives (desired student performances) specified before the student uses the system.

As career education programs are established, the placement of graduates from career education systems will receive more attention.

·Evaluating the effectiveness of placement and follow-up programs basically should address the following questions:

Do student populations need placement and follow-up

placement and follow-up evaluation

- 2. Is there adequate staff to provide placement and follow-up services?
- 3. Is there adequate staff preparation for doing placement?
- 4. Are there adequate resources for placement and follow-up?
- 5. Are placement activities comprehensive and effective?
- 6. What are the results of the activities?

In approaching the last item in the above list, the single most important item, the effectiveness of placement activities must be evaluated on the basis of results.

One tool which can assist in the evaluation of the placement process is placement monitoring. This monitoring can be the basis of evaluating not only the results, but the process used to achieve those results.

The first five items on the above list are the placement planning process steps. The sixth item relates to planning for evaluation of the product. As with all evaluations, 'the product is the primary basis for evaluating the process. In evaluating the placement results, the following information should be considered:

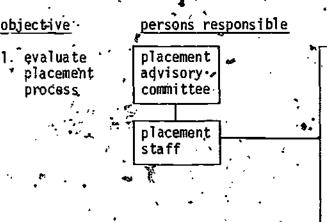

- -- the students perved
- -- employer contacts made
- -- referrals made
- -- placements made
- -- placement openings not filled and the reasons why
- -- types of placements made
- -- success of placements
- -- conditions of labor market

The collection of these data alone is not an evaluation. The Placement Guide in Section V of the Handbook for Implementation contains two models of placement programs. One for a school-based program, the other for coordination of local and area placement activities.

Because the placement activities of different educational programs vary greatly; they should be evaluated in terms of these models rather than in comparison to other placement programs.

The Michigan model then incorporates the collection of data into an evaluation designment

- Michigan A placement evaluation model

activities

- a analyze and evaluate followup data in terms of placement effectiveness
- b. prepare required reports with appropriate data, evaluation, and recommendations for modifications

- evaluate placement program
- superintendent
 building
 administrators
- a. receive required reports
- b. assess effectiveness of placement program
- c. approve approporiate recommendations for modification

3 modify placements program placement advisory committee

placement staff

- a. redesign program components in accordance with approved medifications •
- b. implement'
 modifications

staff development evaluation Staff development is an integral part of the instractional, guidance, exploration, OIS, placement and following programs.

Staff development evaluation will be discussed in detail in chapter III.

other evaluation tools Each program area discussed is evaluated on the basis of identified skill and knowledge student outcomes.

- There are several tools, other than those already covered, which can be used to evaluate student outcomes:
 - standardized instruments
 - criterion referenced tests
 - mastery tests

standardized. instruments A standardized test generally includes broad-based items. Therefore, the user of such a test should interpret only those items that pertain to the program area being evaluated.

Some standardized instruments which measure aptitudes, occupational awareness, and individual career development are:

- 1) the Assessment for Career Development, by the American College Testing Program and marketed by Houghton-Mifflin Company
- 2) the Armed Services Vocational Aptitude Battery
- 3) Vocational Planning Inventory (VPI), by Science Research Associates
- 4) Career Maturity Inventory by John Crites
- Differential Aptitude Tests (DAT)
- र्दें) General Aptitude Test Battery (GATB)
- 7) Flanagan Aptitude Battery

The following are frequently used interest surveys:

- 1) Strong Vocational Interest Blank (SVIB)
- 2) Ohio Vocational Minterest Survey (OTIS)

- 3) Kuder Preference Survey, form DD
- 4) Self-Directed Search by John Holland
- 5) Hall Occupational Orientation Inventory (HOCI)
- 6) California Occupational Interest Survey
- 7) Interest Checklist by the U.S. Department of Labor

Information on these and other tests can be found in Buros' "Sixth Mental Measurement Yearbook."

This approach involves the construction of evaluation items which measure a specified level of mastery in a skill based on specific objectives identified for achievement. Samples of this approach could include the recall of specific occupational information, the ranking of important individual values, and demonstrated skills in making systematic decisions (see supplement Q).

When using this evaluation technique it is important to state minimal performance criteria as specifically as possible.

This evaluation approach asks individuals to solve problems or in some way apply skills or knowledge. An example of this technique would be to ask individuals to name (verbally or in writing) as many jobs as possible in the construction trade. A specific example of this test is the "Career Achievement Skills Test" by the Career Development Service in CEPD 29.

In the evaluation process, effort is put into designing a plan, developing or identifying instruments, collecting and analyzing data. It is important to exercise care and logic in using evaluation results.

The first consideration in using evaluation results is to identify the primary audience. The evaluation report format should take into account characteristics of the target audience, (i.e., age, educational level, interest areas) as well as the reporting situation (i.e., time available for the report, audio visual resources, placement on the agenda). Another consideration is the purpose of the evaluation report (i.e., to persuade, to inform, to provide data upon which to base decisions).

Short reports are usually written evaluation reports, two to three pages, which summarize the most pertinent evaluation data. They are most useful with an audience

criterion referenced tests

mastery tests

Using Evaluation Results

Reporting results

Reporting formats

which has limited time or direct interest.

Graphs and tables can be displayed by various methods. These are useful with any-sized audience and have the chief advantage of being able to explain complex variables, summarize results and highlight narrative reports.

Brochures can be used as an effective way to explain a program and focus upon positive evaluation results.

Question and answer is a good technique for focusing audience attention on pertinent data. It can be written or oral, but should cover the most pertinent questions the audience might ask.

Technical reports are the most detailed and comprehensive form of discussing evaluation results. They present data, define procedures, explain the use of instruments, detail data collection techniques, explain sample selection, and the analysis and interpretation of data and provide a summary of the results.

CHAPTER III Staff Development Chapter III

The next two chapters deal with staff development and promotion. These functions have been isolated from career education programming (Chapter II) only for the purpose of focus and clarification. In reality, staff development programs and promotional campaigns should be concurrent with the planning, implementing and evaluating of career reducation programs.

Staff Development Program A well designed staff development program allows the participants responsible for planning, implementing and evaluating career education programs to perform those functions effectively.

It delivers the skills and knowledges necessary to get organized, assess existing programs, set goals, manage curriculum, implement strategies, to evaluate and follow-up career education efforts.

figure "A" specifies the levels of staff development which correspond to specific process steps in career education programming. It also suggests the participants in the process and the staff development outcomes of the program at each level.

`staff development doals Staff development focuses on two general goals;

- -- to create an awareness, understanding and commitment to career education
- -- to develop or improve competencies for planning, haplementing and evaluating career education

Table "1" outlines materials which are or will be available to assist CEPDs and LEAs in coordinating staff development programs.

Effective inservice for staff development at any level is directly related to five variables:

- the commitment of the participant
- -- the value the participant places on the objectives of the inservice.
- -- the awareness level of the participant prior to inservice
- -- the development and delivery of the inservice tool
- -- the experience that the participant brings to the inservice

Therefore - participants in a staff development program should be selected on the basis of their preparation and interst.

The coordination of a staff development program follows a pattern similar to any other aspect of career education. (see figure "C") It begins with the assessment of staff adevelopment needs:

figure C

A "facilitator" has the responsibility for seeing to it that these steps are taken. The facilitator can be one of any number of persons:

- -- CEPD personnel assisting an LEA in planning a workshop
- -- CEPD personnel coordinating inservice for several LEAs
- -- LEA Coordinator or LEA staff development task force .
- -- University personnel assisting CEPD or LEA in coordinating staff development
- -= Intermediate School District personnel

Assessing Staff Development Needs Assessing needs for staff development is an important first step. It creates staff involvement early in the process of designing the program. It allows staff members to see their input and suggestions incorporated into the program.

Approaches vary. At the end of this chapter are some tools for assessing staff development needs. 'Briefly they are:

supplement V & W can be used to assess staff development needs in general

supplement.X

is a tool to assess counselor needs for staff development

supplement Y & Z are questionnaire tools which seeks to determine where the staff stands in terms of career education and assess their needs for staff development.

Any of these tools can be adapted to the needs of the LEA. When one is selected, the steering committee or task force may design a plan for facilitating staff involvement in completing the instrument and collecting, analyzing, and interpreting the data.

Once staff development needs have been assessed, the .* CEPD is ready to begin working with the local educational agency to establish goals and objectives.

Establishing, Goals and Objectives A staff development needs assessment is the beginning step for setting staff development goals. CEPD.staff and the local coordinator can work with the LEA steering committee or staff development task force to establish goals and objectives for a staff development program based on the results of the assessment.

The staff development program may be designed as a series of workshops or inservice days--according to provisions in staff contracts, staff availability, or staff interest.

It is suggested that the steering committee select one or more goals for the first inservice. The goals identify the general direction or purpose for the inservice; the goals must then be restated in performance terms--what will participants be able to do as a result of the inservice; these performance objectives are often called

participant outcomes. The outcome of the first inservice may affect the goals and participant outcomes of subsequent inservice. The steering committee may choose to establish a series of goals and participant outcomes that would be implemented during the course of a year.

supplement AA represents a set of participant outcomes specified for a staff in one school district for a single workshop

supplement BB is an example of a set of goals and objectives for two workshops for counseling and guidance personnel

supplement CC is a sample set of participant outcomes for a five-day summer workshop

Once participant outcomes (goals and objectives) are stated, CEPD personnel can begin working with the steering committees or task forces to plan the inservice program.

Effective planning should include the following elements:

- -- determining a design and a reward system
- -- identifying the facilitator(s)
- -- identifying an agenda
- -- identifying resources.
- -- arranging fácilities
- -- promoting the program and selecting participants

A useful guide for planning workshops is found in the 'Career Education Workshop Implementor Handbook. It is called "The Workshop Planning Guide" and it defines a model workshop program in terms of identifying;

- -- what is the target?
- -- what will be an effective approach?
- -- what kind of evidence will be accepted as proof of having reached the target?

The guide suggests that one person have the responsibility for the workshop, but that the <u>committee approach</u> to planning and implementing the workshop has built-in advantages. It

Planning

Program

Bevelopment

the

Staff

involves participants and creates a measure of ownership which increases the chances of success.

determining a design and a reward system Is the workshop for a three hour inservice afternoon set aside by the district?

Is it the first of a series of workshops planned for the staff in the district?

Is it a series of workshops planned by a university and offered for credit?

Is it a summer workshop (one week) offered by addistrict or university?

Whatever the design, the participants will need some reward for participation.

The reasons for participation can vary. To some, the acquisition of a skill is reward enough. To others, it may be the promise of credit on the LEA salary schedule, university credit, or peer recognition. To others it may come in the form of released time, compensation, additional instructional resources or administrative recognition.

There are some to whom a free meal is reward enough.

identifying a facilitator Being a facilitator requires not only adequate knowledge and preparation, but a measure of enthusiasm and skill in group leading.

An integral part of selecting a facilitator involves negotiating with that facilitator. In negotiating with a potential facilitator, whether it is university personnel, intermediate personnel, out-of-state consultants, or local personnel, consider the following hints:

I. Have clearly in mind what should happen: Should the participants say it was fun? Should the participants be able to demonstrate an acquired skill? These participant outcomes should be agreed upon by the facilitator and the contractor before the workshop. It is on the basis of these desired outcomes that participants will evaluate the workshop.

- 2. Understand who the audience is and where they stand in terms of career education. Communicate this to the facilitator. A workshop will be designed differently for participants who have solid background in career education than for those who are being introduced to the subject for the first time.
- 3. When the participant outcomes and the audience have been determined, utilize the Consumers Guide (disseminated to all CEPD coordinators) to identify the facilitators:
 - -- with whom you have had personal experience, or
 - -- who come recommended by someone you respect, or
 - -- who provide references who can evaluate past inservices by that facilitator
- 4. When there are two or three choices for acquiring facilitators, meet with them and specify:
 - -- what outcomes are desired
 - -- compensation available
 - -- what is expected of the facilitator
 - -- what the facilitator can expect

When working with facilitators remember that their perceptions of inservice may vary from those of CEPD personnel. Some are specifically geared toward working with local staffs and have release time to do so. Others do not.

Pick and choose carefully. The facilitator is an extremely; important factor in success or failure of inservice programs.

developing an agenda The workshop coordinator and the facilitator usually work cooperatively in developing an agenda. Some agendas are specific, others are general.

Supplements DD, EE, FF and GG are examples of workshop agendas.

Agendas should serve as broad outlines of what the flow and content of a workshop is.

identifying resources

Resources fall into two basic categories; personnel and material. The facilitator is probably the most important personnel resource for the workshop, but other CEPD and local

persons can also be a Valuable resource to assist the facilitator.

They can be utilized at resource stations during the workshop, or as consultants for individual and small group activities.

Material resources depend upon the goals and objectives of the inservice. A workshop materials listing was referred to in table 1 at the beginning of this chapter.

arranging facilities

Facilities should be geared to not only the number of participants, but to the manner in which the workshop is to be conducted. If small group activities are to be used, adequate arrangements should be made to allow group activities which will not interfere with other groups.

If an instructional or media resource center is close-athand it may be used to show interested participants the kinds of resources that exist and how they can be utilized.

Depending on the format of the workshop, practical considerations include preparations for things like tables and chairs, chalkboards, overhead projectors, duplicating equipment, motion picture or slide projectors, sound machines. The facilitator should be able to determine in advance what, if any, of these things will be needed. A ready response to the resource and facility needs of the facilitator during negotiations could serve as an indicator of his or her preparedness, and qualifications for running the workshop.

Meeting locations should be tlearly marked. Coffee and refreshments should be provided.

promoting the program and selecting participants Commitment by the local administration (and school board) can facilitate acceptance of workshops among the target audience.

A simple informative promotional tool can be the first step in getting significant participation. Flyers or news-letters are easily distributed.

Supplements HH, II, and JJ are examples of staff developed promotional efforts by project CEPDs. For ease of response, a detachable reply card/registration card, is a sure winner.

In selecting participants, some general guidelines are suggested: . \blacksquare

- 1. Determine the number of participants to be inserviced It is recommended that workshops generally do not exceed twenty-five participants, but this number will vary with the nature of the inservice and the selection criteria used. Communicate your selection criteria clearly.
- 2. Determine the grade levels and possible subject matter areas to be included in the workshop. While not necessary, you may wish to limit the workshop to specific grade groups (elementary, junior high and senior high school). Be sure to make any restrictions known to would be applicants.
- Local district and building administrators/should be encouraged to participate in the promotion of workshop activities and the selection of participants.
- 4. Mandatory participation should be strongly discouraged.
- 5. Participation should be encouraged for those who have demonstrated a genuine interest in career education and a willingness to develop delivery techniques.
- 6. A combination of teachers, counselors, and administrators can increase communication in building a unified inservice program.
- 7. 'An attempt should be made to have participants agree to;
 - -- participate in the total workshop, not just one part
 - -- develop and use curriculum materials and teaching techniques as identified in the workshop.
 - -- serve as future resource persons for other efforts.

Once the participants have been selected, it is recommended that they be formally notified, and that they receive information about the objectives of the workshop, its schedule and design, its time, place and dates (as well as any preparation required of participants), procedural information about the facilities, and any college required procedures (if the workshop is for college credit).

Supplements KK and LL should assist CEPD personnel in communicating this information.

Supplement KK is a series of workshop plans for local career education coordinators to be conducted by the CEPD staff.

Supplement LL is a career education steering committee plan stating objectives, inservice requirements and program evaluation information.

Implementing the Program Implementing-a workshop should generally address the following subjects:

- -- prestesting to determine the career education awarenesses of the participants
- -- involving the participants in group cohesiveness activities that foster cooperation in reaching common goals
- -- providing breaks at appropriate times
- -- mixing large group, small group and individual activities
- -- the ability to change activities in reaction to participants responses.

Evaluating the . Program A common evaluation of workshops is the post test which can be adapted from pre-test (familiarity/with the form can make it easier for the participant to concentrate on the content). It helps determine if the stated goals were met. An example may be referred to in the Career Education Workshop Implementor Handbook.

Another evaluation can take place during the workshop. It usually takes the form of a questionnaire asking the participant to react to the workshop activities, resources and the facilitator(s).

Supplements MM, NN, and OO represent sample evaluation forms used in workshops.

Following-up the Program Without an adequate follow-up program, staff development efforts may become utterly useless. More than one GEPD coordinator has been heard to comment, "I inserviced those people last year, and now I have to go back and do it all over again."

Ideally an inservice would create enthusiasm in the local staffs to use the tools gained at the inservice. To whatever extent that enthusiasm for using new skills exists, the CEPD should be actively involved in capitalizing on it. It is necessary then to encourage and assist local staffs in using the tools.

The fareer Education Workshop Implementor Handbook contains one technique for follow-up. "The Personal Goal Setting Form" allows participants to specify goals for developing curriculum and implementing curriculum developed at the workshop.

The following is a series of steps to consider for followup to a staff development program.

- The workshop implementor should assume responsibility for the follow-up effort by initiating the follow-up activities or by identifying another person who will (building principal, local career education coordinator, or others).
- 2. The follow-up person (coordinator) should attend all sessions of the workshop and should arrange a meeting with participants at the beginning of school to cooperatively plan follow-up activities.
- 3. The coordinator should arrange for periodic meetings to review progress and extend or modify plans.
- 4. The coordinator should enlist resources to aid in the achievement of participant goals.
- 5. The coordinator should initiate reward systems to recognize accomplishments of the participant group and to provide an incentive for continued interest. The reward offered for performance could be university credit, credit on the district salary schedule, released time for additional planning, recognition of accomplishment, involvement in helping others to implement career education.
- 6. Identify persons who have noticed the work of the participant (parents, other teachers, administrators) and provide clarification if necessary, perhaps encourage participation, and inform the participant of the attention he or she has attracted.

COMMUNITY.SCHOOLS*

Inservice Program
- March 3, 19___

By the completion of this inservice you should:

- 1. Be more familiar with the Curriculum Council of the Community Schools, its role and function, and its efforts this year in organizing a curriculum structure for Community Schools.
- Be familiar with the three major learner goals of Community Schools and have related K-12 subject matter goals to these overall district goals:
- 3. Be familiar with the suggested thrust of the Reference Guide to Career Development Performance Indicators and how it can be used by you in planning instruction.
- 4. Have identified by subject matter area at least six additional career development goals for which you will be willing to contribute instructional efforts.

409

Adapted from work done in CEPD 35, 36, and 47.

Here is a sample set of inservice goals and objectives for guidance staff development.

Goal'1.0: To give counselors the skills necessary to select, organize, classify and use career guidance materials for a Career Resource Center as well as in a classroom.

Objectives:

- 1.1 Given the S.R.A. Career Information Kit, the counselor can use the kit to find information about many jobs and can teach a student how to use it.
- 1.2 Given the V.I.E.W. material, the counselor can demonstrate for teachers how to use it and explore with them ways in which they may integrate it into their curriculum.
- 1.3 Given a list of career guidance materials, the counselor can prioritize each item on the list in terms of its usefulness and select the five best materials for their Career Resource Center.
- Goal 2.0: To provide counselors with the skills to aide teachers infusing career guidance activities into their curriculum.

Objectives:

- 2.1 The counselor will identify three ways in which the curriculum could be strengthened by the cooperative involvement of a counselor and a teacher.
- 2.2 The counselor will be able to identify where in the curriculum guidance activities are, or could be, implemented with the cooperative effort of a teacher and counselor.

^{*} Adapted from The Process Guide for Career Guidance, MDE

CAREER EDUCATION WORKSHOP PARTICIPANT PERFORMANCE OBJECTIVES**

Given the necessary time, resources, and information, and coupled with a collaborative effort on the part of all in attendance at the workshop you should be able to achieve the outcomes noted below:

- Develop and articulate to others a definition of career education he/she can support and promote.
- Possess a knowledge of and articulate to others the complementary relationship that exist between the concepts of career education and their present education programs.
- 3. Value the process of integrating career development performance indicators with career preparation performance indicators which include academic vocational and technical subject matter performance objectives as a productive means of improving school curricula.
- 4. Associate other services and resources available within local district to assist in the implementation of the career education concepts.
- 5. Develop through a prescribed format a minimum number of lesson plans or career guidance plans that you can use during the next school year.
- *6. Identify and make application of home, school and community resources which will contribute to the effectiveness of the pupil's learning experiences.
- Promote the cooperative working relationships between teachers and counselors to increase the effectiveness of the pupil's learning experiences.
- *8. Value the process of planning instruction in a systematic manner that is characterized by answering the following statements:
 - Determining and describing what it is we want to achieve.
 - Doing what Ts necessary to achieve the desired results.
 - Checking to see that we have succeeded in doing what we set out to do.

^{*} Optional -

FROM: Workshop Facilitators

DATE: January 22, 19_

RE: Inservice on Tuesday, January 27, 19_

For the workshop on Tuesday we need your cooperation and help with the following:

- Bring any lesson you are very familiar with that you want to infuse career education into. Relevant materials and/or lessons plans will help. In addition, bring your copy of Goals & Performance Indicators. A (Jolly Green Giant)
- Before the workshop you should decide whether to work individually or <u>with another</u> teacher, counselor, CETA aide, reading teacher or media personnel. No more than 3 to a group please.
- Attached is the activity sheet we are asking you to fill out during the workshop (two copies please). One copy is to be given at the end of the workshop to the coordinator in your building.

Plans are to publish the lesson topics and a one sentence description of the activity by building. .

Room assignments are as follows: (All rooms are in the east end of the building.)

Grade .	•	Room -	
<u>K + 1</u>		Rooms 9 & 10	•
2 + 3 ~		Art Room	
4 + 5		Media Center (Library	1)

Resource Room Teachers & Aides - Lounge Art, Music, and Phys. Ed. . - Music Room

Administrators, aides, CETA aides, counselors, media coordinators, media clerks and reading teachers are asked to work with any teacher as listed in the five groups above. Only one of these people to-a group.

-People who want to work by themselves in peace and quiet/may wish to go to the Media Center, Room 6.

COFFEE WILL BE AVAILABLE AT 7:30. THE WORKSHOP IS TO BEGINAT 8:00 am IN THE ALL PURPOSE ROOM. After a general session we will break up into smaller groups as out-lined above.

'AGENDA for the workshop is as follows:

- Introduction
 "A Short Overview of Career Education"
- Questions & answers
- A career development activity An Example
- 5. Experiencing a "Career Education Lesson".
- The Infusion Process demonstrated
- 7. Activity development break into groups according to the above
- Adapted from workshop conducted in CEPD 32

LEADERSHIP DEVELOPMENT

FOR

CAREER EDUCATION*

A WINTER WORKSHOP

WHAT

This graduate workshop is designed primarily for those leadership personnel who have been given the responsibility for developing a local district's comprehensive Career Education program. Administrative leaders, local Career Education Coordinators and others will develop strategies for implementing the Local Career Education Plan submitted by their district for 19——. The workshop will also provide a vehicle through which the many facets of a comprehensive program for Career Education can be efficiently coordinated. Districts may enroll teams to facilitate greater communication and interaction between administrative and Career Education leaders or individuals may wish to develop Career Educaton leadership skills.

WHEN

Registration for the workshop and the first session will be held Wednesday, January 14, 19 at 4:00 P.M. at

Subsequent meeting times and places will be determined by workshop participants. The workshop will meet nine Wednesdays for approximately 3 hours each.

INSTRUCTOR

Associate Professor,
University will have primary responsibility for instruction.
A variety of consultants and other resources will be used to meet the individual needs of participants.

UNIVERSITY CREDIT REQUIREMENTS OF WORKSHOP PARTICIPANTS*

Those enrolled in the workshop for three (3) semester hours of credit will be expected to complete the following tasks:

- 1. For those desiring an "A" in the workshop, the following criteria must be met:
 - Α. Perfect attendance during all sessions of the workshop.
 - Completion of a minimum of four (4) curriculum worksheets, each of which will contain in writing:

One academic performance objective

- (2) One career development performance objective (3) A minimum of three (3) learner activities designed to achieve the objectives noted - these activities should provide the learners with several options regarding achieving the objectives.
- (4) Necessary resources, teacher activities, and support services needed to bring about the identified learner activities.

5) A pre-test design.

(6) A post-test design.

C./ Including one (1) of the four (4) curriculum worksheets, the identification of a community resource to be used in the implementation of the lesson noted by:

The completed community resource contact sheet.

- (2) A summary of the interview with the community resource contact.
- Presenting one (1) curriculum worksheet lesson to workshop Participants.
- E. Including for one (1) of the four (4) curriculum worksheets a media aid which will contribute to the achievement of the objectives of the lesson. This is to be an aid constructed by the participant, rather than a commercial one.
- Completing an additional project related to the workshop objectives. This project will be determined by the participant and have the agreement of the workshop coordinator. Some examples of additional ' projects include:

Completing additional media aids.

(2) Development of additional lessons.

Complete additional community contacts related to planned lessons.

(4) Other projects.

3.4.

- For those desiring a "B" in the workshop, all criteria noted above must be met with the exception of the number of curriculum worksheets to be completed. Participants will be required to complete three (3) curriculum worksheets.
- * Adapted from work done by CEPDs 35, 36, and 47

A SCHEDULE OF WORKSHOPS FOR EDUCATORS IN OUR AREA*

I. Creating the "Our Classroom" Feeling

This workshop is designed for teachers who are intent on promoting within their classroom the concept of "our". It deals with our, we, us, rather than I, me, my. Specific examples from actual classrooms are shown. The emphasis is on notions of self-awareness, togetherness, and relating in honest, human terms. There will also be a display of teacher-made materials dealing with self-awareness. Participants will have an opportunity to examine these materials, copy ideas, and discuss adapting and using these materials with the workshop consultant.

- II. Meeting A Special Need: Gifted Students
- ? What is Giftedness?
- How can we identify gifted and talented students in our schools?
- How can I design tasks and activities for gifted students in my classroom?
- ? What are other school systems and teachers doing to meet this special need?

This workshop will offer answers to these questions, and many more.

Local District Career Education Coordinators*

TO:

LOCAL DISTRICT CAREER EDUCATION COORDINATOR WORKSHOPS

PROGRAM #1 - ORGANIZING LOCALLY FOR CAREER EDUCATION

Questions to be addressed at this workshop:

- (1) How to organize a local district steering committee. What to do, what kind of goals to establish.
- (2) Identifying the roles of staff in local district Career Education efforts.
- (3) Identifying the changes promoted by Career Education and what they mean for a local district.

Resource People: \ Yet to be determined .

PROGRAM #2 - GOAL SETTING AND THE LOCAL DISTRICT

Questions to be addressed at this workshop:

- (1) Identifying approaches to establishing a curriculum structure for your instructional programs.
- (2) How to use the Michigan Department of Education Goal Setting process in establishing local district goals.
- (3) How to use the Phi Delta Kappa Goal Setting process in establishing local district goals.
- (4) How to develop your own unique methods in establishing local district goals:

Resource People: ______, Mic

Michigan Department of Education Elementary Principal High School Principal

PROGRAM #3,- CREATING AN AWARENESS OF CAREER EDUCATION FOR SCHOOL PUBLICS

Questions to be addressed:

- (1) Methods and techniques to use in making the following groups aware of Career Education:
 - A., Boards of Education
 - B. \ Steering Committees
 - C. Administrative Groups
 - D. Leachers, Counselors, and Support Personnel

When:

Friday, October 31, 19. 9:30 a.m. - 12:00 noon

Where:

Resource People: Yet to be determined

PROGRAM #4 - INTRODUCTION TO PILOT STRATEGIES TO IMPLEMENT CAREER EDUCATION

Questions to be addressed:

- (1) Training trainers for infusion Process.
- (2) Exploration Programs.
- (3) Utilizing media and materials.
- (4) Guidance and Career Education:
- (5) Providing follow-up services to those implementing Career Education in the classrooms.

When:

Week of November 17:

PROGRAM #5 - CREATING AWARENESS FOR COMMUNITY PUBLICS

Questions to be addressed:

- (1) Creating awareness for the following publics:
 - A. Parent groups
 - B. Severe-oriented groups
 - C. General public

CAREER EDUCATION STEERING COMMITTEE*

The Career Education Steering Committee has been working since September the area of career education and should be commended for the progress they They have worked diligently to determine the needs of the students in

When Phase II and Phase III of the Career Education Pilot Program is implemented, the Steering Committee will be expanded to include members of the community and students.

: CAREER EDUCATION

It is recommended a three phase Career Education Pilot Program be conducted in the Schools.

Phase I Determine the State Career Education Goals which are appropriate for/each grade level or subject area K-9.

> Determine the materials which are appropriate for implementing the selected State Career Education Goals for each grade level or subject area K-9.

Determine the community resources (speakers, etc.) and places to visit which are appropriate for the implementation of the selected State Career Education Goals for each grade level or subject area K-9.

Phase II Develop lessons or units of study for infusing career education goals into the existing curriculum.

Implement the selected State Career Education Goals into each Phase III' grade level and subject area.

When to It is recommended Phase I of the pilet program be conducted during the second semester of the 19_- school year. The first phase would commence January 26, 19_ and conclude June 11, 19__. conduct pilot

The grades involved would be at least one self contained grade level from kindergarten through fourth grade. Fifth grade . What Grade Level ~ will conduct through ninth grade levels would pilot the program in one of the gilot subject areas.

A survey will be conducted to identify those teachers who are interested in participating in the Career Education Pilot Program. conduct

OBJECTIVES OF PHASE

Who

will

pilot

- Career Education pilot teachers will determine the State Career Education goals appropriate for each grade level or subject area (K-9). This determination will be made through investigation and trial at the different grade levels and in the different subject areas (K-9).
- Adapted from work done in CEPD 32

- Career Education pilot teachers will determine the materials appropriate for implementing each selected State Career Education goal. This determination will be made through investigation and trial at the different grade levels and in the different subject areas (K-9).
- 3. Career Education pilot teachers will compile a list of community re'sources (speakers, etc.) and places to visit which are appropriate for
 the implementation of the selected State Career Education Goals for
 each grade level or subject area (K-9)

INSERVICE FOR IMPREMENTING PHASE I OF THE CAREER EDUCATION PILOT PROGRAM

- 1. Members of the Career Education Steering Committee will attend training workshops.
- One half-day of inservice will be conducted by the Career Education Steering Committee members for all pilot teachers on January 14, 19...
 An additional half-day will be provided if needed for pilot teachers.

Objectives of the inservice are:

- a. Explain the State Department of Education's Career Education plan.
- Explain our LEA's Career Education plan which was submitted to State Department of Education.
- c. Explain the Career Education Pilot program (K-9).
- d. Explain the Career Development Goals & Performance Indicators.
- ë. Display, materials.
- 3. Provide one half-day for pilot teachers and members of the steering committee to compile a list of the selected career education goals, materials, and community resources to be used at the various grade levels and subject areas (K-9).

OBJECTIVES OF THE CAREER EDUCATION STEERING COMMITTEE

- 1. Sefect through a survey those teachers who are interested in participating in a Career Education Pilot program commencing January 26, 19____ and ending June 11, 19__.
- 2. Committee members will be responsible for:
 - a. maintaining personal contact with a designated number of pilot, teachers for a minimum of two visits per month.
 - b. reporting to the Steering Committee any problems or area of strength associated with the Career Education pilot program.

 Compile an internal resource catalogue of available career education materials.

EVALUATION OF THE CAREER EDUCATION PHASE I PILOT PROGRAM

The objectives of the Career Education phase I pilot program have been met if:

- A list of career education goals appropriate for each grade level or subject area K-9 is available by June 11, 19.....
- 2. A list of materials appropriate for implementing each of the selected career education goals grades K-9 is available by June 11, 19__.
- 3. A list of community resource people and places to visit for the implementation of each selected career education goal K-9 is available by June 11, 19

Phase II and Phase III of the Career Education Program would be implemented during the 19_{--} school year.

INSTRUCTIONS

To determine whether or not this inservice workshop met your needs and our objectives, please give us your honest opinion on the design, presentation, and value of this experience. Circle the number which best expresses your reaction to each of the items on this page. The last page provides space for your comments.

Thank you for your help. A summary of all comments will be made available through the workshop director in approximately two weeks.

Please return your completed forms to the workshop director before you leave.

CHAPTER IV Promotion Why Promote

1**4%** 14.

The success or failure of career education efforts is directly related to effective promotion. The goal of promotion is to develop community commitment and involvement.

Effective promotion can create the following outcomes;

- -- the community becomes involved in the identification of goals.
- -- community.resources are identified and utilized/in career education efforts.
- -- the community is involved on advisory committees.
- -- support for millage requests is increased.
- -- the schools become less isolated from the community.

For some of the persons involved in education, the CEPD's or LEA's staff development program creates career education understandings. But staff development does not necessarily reach the community or the students.

In designing a promotional campaign, the following should be taken into consideration:

What are the primary audiences?

- 2. What kinds of messages would most likely arouse their interest and support?
- What are the audiences' goals and expectations for education?
- 4. What does career education offer as a means of meeting those expectations and goals?

5. Who has credibility with the target audiences?

6. What are some special concerns of needs of the target audiences? (i.e., The Lions Club offers services for the blind. How can career education facilitate this service?

The CEPD responsibility for promoting career education should not be limited to the schools. Parents, community leaders, workers, taxpayers and educators, must be aware of career education and its implications.

They must be encouraged to take an active role in education. They should be induced to lend individual expertise as an essential element of comprehensive career education.

Promotional efforts should be constant, consistent, and seek to build upon information that has been introduced to audiences. (Some experiences show that one-shot media blitzes receive much attention, but that afterward things revert to "normal.")

Preliminary promotional efforts should attempt to create the awareness within the community that career education is a positive concept designed to help individuals more effectively perform life roles as students, family members, workers and citizens.

The Audiences

The Audiences

How to Promote First efforts-should be intense but brief. They should create a general knowledge of the name "career education" as a concept of education. This lays the groundwork for discussions in greater detail.

The Techniques

When initial awarenesses are created promotional efforts should shift to the active involvement of the community as a resource. What follows is a brief listing of some promotional tools. Later in this chapter these tools will be

discussed in greater detail, with some suggested activities and samples.

- -- posters simple with striking graphic design, usually expressing a single thought.
- -- radio spots 10 to 60 seconds (usually in ten second increments) carrying a forceful statement outcomes of a program.
- television spots similar to radio spots, but with a visual content that should compliment the spoken message. Inserted during programming breaks.
- -- 'slide/tape combine relatively inexpensive still photography or art work and a taped sound track. Ideal for classroom or parent meetings. Offers great flexibility. Easily reproduced and circulated.
- -- flyers mailable pamphlets covering a wide range of ideas and activities. Inexpensive and communicate well, if intelligently designed, written and organized.
- -- newsletters aimed at parents or other educators, concentrate on activities in the classroom, acknowledge innovation, name names, identify students, promote community involvement.
- -- feature articles straightforward discussions of terminology, practical activities and their results. Developed cooperatively with editors of community newspapers.
- -- news releases to local news outlets and broadcasters about future activities:

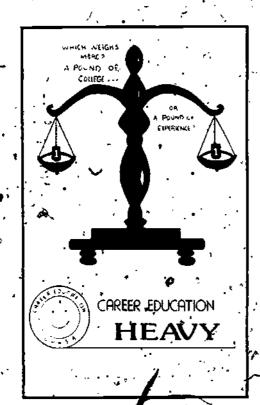

Posters

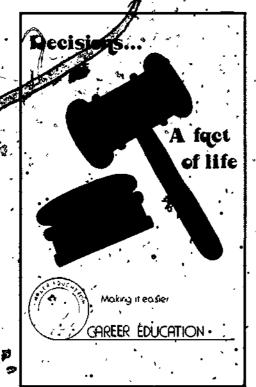

Posters are a nighly visible promotion device if properly placed for public viewing. They should create initial awareness that career education has a name and it represents a positive concept.

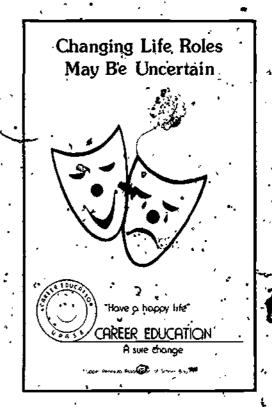

The messages used can run from a very simple, "Happinessis Career Education," to a connotative approach, "Career Education: helping me make my own choices for my own future."

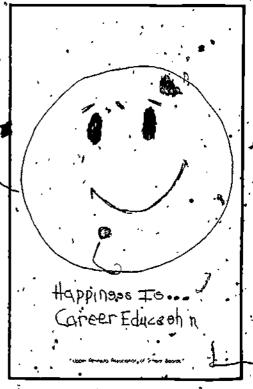

An arresting and aesthetic design can be illustrative or abstract, but it should not interfere with the readability of the message.

sample posters

196a

Getting posters done can be a positive opportunity for the promoter. By involving students and teachers in making posters, the promoter can also introduce them to some initial career education awarenesses. Then students can translate those awarenesses into visual messages about the positive nature of career education.

Also student participation in the creation of posters can arouse parent interest and lead to student/parent discussion, and parent/parent discussion.

Student participation at the same time means that the infusion process is being used (whether or not is is identified as such at the time). Interpretive skills are being developed along with language skills, mechanical skills, and visual learning. Student placement of posters within the community can serve as a bridge between student and the containty.

Radio spots provide ah excellent way of involving students, teachers and community resources in developing career education promotion.

radio

spots 🗗

Establishing rapport with your local radio program director can have some long-term advantages. CEPD promoters can develop their own spots, or the station may do it for them.

All broadcasters are required by the FCC to donate air time for a certain amount of public service broadcasting. When licenses come up for examination, the broadcaster must be able to demonstrate compliance with federal guidelines. Station managers do not need to be reminded of this. Acknowledgement of donated time in the form of a complimentary letter will help the station justify its claims of public service, and probably result in more assistance in the future.

One day's radio broadcasting contains literally thousands of spoken messages. To distinguish one message from another, a variety of techniques are routinely employed. By listening to one broadcast hour of a station which has a high verbal-to-music ratio, one can identify these techniques.

A promoter has to make the career education message heard among all these competing messages.

The station contact person may be able to suggest ways to make the message heard. Station staffs are proud of their professionalism and can be a great asset in clarifying messages and streamlining presentations. Tact and

438

charm can make your promotion stand out when sandwiched between some of the more obnoxious offerings.

a suggestion Here is one suggestion that just may yield the kind of results the promotion is meant to have:

Make two contacts; one with the station programming director, the other with one of the local educators. From the station person, try to secure a commitment to use promotional spots.

Offer an idea to the local educator. Working with a speech, English, or journalism instructor, plan classroom activities that meet the objective of developing a promotional tool.

The students can; as a cooperative venture, research career education and develop ideas about its positive nature. With some guidance they can develop a script and choose a speaker (tape auditions). They can record, analyze-strengths and weaknesses in technique and help one another in developing a project that is theirs. The school's language lab can be utilized, or the intermediate district may provide recording equipment. The students discuss the addition of sound effects where they can strengthen the delivery. They record the message, with and without them and compare. They time it accurately. Speed up the delivery or slow it down. Edit out ambiguities and discuss volume, tone and mood. Perhaps make recordings using more than one person. Just basically explore different approaches.

During these activities, the CEPD promotion person can monitor progress and re-establish contact with the station person. Explain student enthusiasm and reach an understanding with the broadcast person about reinforcing the students in their efforts, while keeping in mind the professional sensitivities of the broadcaster.

The students should be introduced to the concept that their work will be listened to critically and they should be receptive to small changes here and there.

When the students are satisfied with their product, they should be prepared for a test. Arrangements should be made to visit the station and present the spot to the broadcaster.

If rapport has been established, the semilitive station person probably will not attempt to completely rework the students' project, but he or she may suggest recording the same message in the studio to enhance the technical quality.

The first result is a promotional tool. In all likelihood it will be noticed for some important reasons. It will feature the voice of a student. A promoter should not underestimate the attention getting ability of a less-than-mature voice speaking about something that is important. It serves as an uncommon departure from standard radio fare. (Some commercial developers have noticed this took and less-than mature voices now are becoming more common in commercials.)

Something else happens in addition to the development of the promotional tool. Career development skills have been infused into subject matter in the classroom. The students have developed some cooperative skills, have done some self-awareness and assessment on an individual and group basis (in the selection of voices during audition). They begin to deal with the concepts of career education in the development of the script. They experience career exploration in their work with the broadcast person. The broadcast person has become a community resource.

And if that is not enough, student pride of accomplishment can carry into the home. Family members and relatives may listen for the spot. Other parents may hear of the spot and listen for it.

Obviously, radio spot promotion can be done in a variety of ways. There are commercially packaged career education spots. The CEPD staff can do the promotion, or the radio station can work from a script, but students as resources should not be underestimated. CEPDs have received sample radio spot texts from the Michigan Department of Education.

Many, of the same things apply to television which apply to radio. An important difference is the visual element. Radio listening often is concurrent with other activities, but television viewing is a passive experience. Because of this, the television spot does not necessarily have to work overtime to be noticed. The techniques used to make a television spot noticed can be subtle: A career education promotional spot can provide some welcome relief from the constant commercial abuse that is heaped upon the viewer.

A serious, non-commercial, intelligent spot can deliver valuable information about career education and perhaps ingratiate the viewer to the cause.

And it may help the broadcaster justify claims of public service. A commitment by the station can start things in motion. It may offer to provide materials and technical assistance, or it may offer to produce the spot.

1440

television

spots

A promoter should lalso consider using students as a resource. Students talking about their own education can be highly effective where adult commentary may fall apart as a promotion.

There are some general techniques that can be considered:

static visual - voice over

Probably the simplest technique. Stations often use this technique for short duration breaks in programming and advertising. It consists of a photo, drawing, painting or design. It remains on the screen during the spoken message. It should be reserved for shorter spots. On television a static scene can be hypnotic if the verbal message drones on and on. The message can be lost on a hypnotized viewer.

videotape (or ♠lm) - voice over

If videotape is available from the station or from one of the area's skill centers it can be used for this technique. A short segment most likely concentrating on school-aged persons engaged in school, work, family, or leisure activities is combined with a narration by someone "off camera." If sounds of activities are included, they should be muted enough to not interfere with the narration.

videotape - live narration

1) subject monologue - the narrator in a specific recognizable setting talks directly to the viewer, maintains eye contact, and explains the message.

2) narrator monologue - narrator explains what is taking place around him or her and relates those activities to the message. The information in the visual reinforces the narration.

Students as resources in developing television spots.

One community source person suggests the following:

If student involvement is pursued, take care that the prettiest child isn't the only one considered for an appearance.

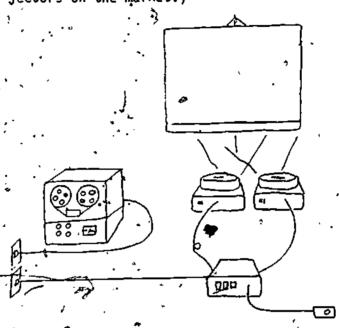

A more realistic reflection of students often is highly effective. Also, the spot should strive to be natural. The student or any other narrator should be at ease with the camera and with the things he or she is saying. A heads-up' speech on drama teacher can help a student speak in terms he or she usually uses for communication and still get the message across. Too much direction and polishing can

ige across : Too muc الا

suggestion

projector. With the light out, the first projector advances to the next slide.

Both projectors are aimed at the same spot on the screen. What the viewer sees is a scene; that dissolves into a second scene. No black out no white flash just a smooth transition. (In an ever-expanding visual market many manufacturers are making dissolve units with many additional features, that are compatible with the most common projectors on the market.)

Some dissolve units can be coordinated with automatic pulsing units. It is obvious that unless a district already has this kind of equipment available, simpler approaches probably should be adhered to. The equipment and its maintenance is expensive.

Some systems incorporate two separate tracks on opposite sides of the room, quadrophonic sound, and as many as ten projectors. Though the presentations are impressive this often is too much. The technology of presentation can overwhelm the message. Viewers can come away impressed, but rarely informed when this approach is taken. A suggested way to communicate is to keep it simple and easy to follow. Keep the content clear and concise.

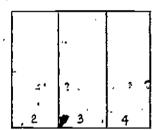

"Flyer" is an open definition of a small handbill. It generally is used as an announcement vehicle, or a preliminary overview of the kinds of information which later can be discussed in detail.

flyers

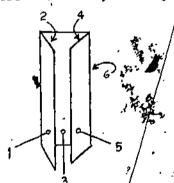

It can provide basic information, or it can announce a discussion where information will be disseminated. Career education course offerings, programs, meetings, introductory, material all can be put into flyer form, mailed, handed out or posted.

Its chief advantage is that it is small, portable, inexpensive and brief. It is relatively easy to produce and distribute. Formats are flexible.

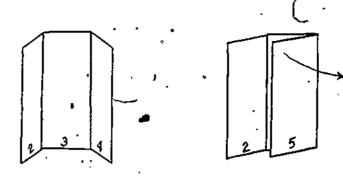

Regardless of who designs the flyer, there are a few rules that can assist in simplifying the production and assuring that the flyer is easily understood. For beginning a series of flyers, there is one format that provides great flexibility and is highly effective. It begins with an 8 1/2 x.11 inch piece of paper, placed horizontally. It is divided into three equal sections:

When folded on these divisions, the flyer has six functional sides.

In a great number of cases, the cover of the flyer appears to be page (1). The backside of page (1) would be page (2). In general, the text should probably start on page (2). (formal education emphasizing the need to read from left to right.) If this approach is followed, then, for the sake of not confusing some people, the flyer should open all the way up, containing three sections to handle the bulk of the message and whatever graphics are used.

But there can be problems if the designer is not careful. When the flyer is first opened, page five is opposite page two. There can be some possibility of the reader attempting to read from page two to page five, unless it is made obvious that page five is not a continuation of page two. The simplest way is to make page five look different than the text on page two.

If page (2) is basically textual with some subject headings, page five can be dispensed of in a number of ways, depending on the content and purpose of the flyer.

If the flyer is asking a response--for a workshop, or source materials, a mailing card can be placed here. If there is an additional message that does not fit well within the main text, it can be placed here. (If this is the case, the page five should appear significantly different than the main text.) Perhaps a bold face statement that relates to the main text, or the beginning of an explanatory text that continues over to page six. Perhaps, photography or illustrations and headings. If page five is self-contained then where or what is page six?

Page six is ideal for a self-mailing label. This cuts the need for envelopes, and stuffing. And because it is on the back of the whole flyer it does not make a logical position for an extremely important message. (it also may be used for acknowledgements, logos, etc.)

Other things to remember in designing a flyer:

- -- identify the source of the flyer
- -- give a number or contact for more information
- -- identify the concept dealt with
- -- avoid darker colored papers when using photography (photographs don't show up).

- 2- if using colored ink, stick to darker shades of brown on lighter papers
- -- the cover page should have a relatively bold title
- are available. Make typeface selection on the basis of readability.

career education in michigan

a project devel under pert C 11P L 90 5761 newsletters

* 6 4

Items, of no apparent news or feature value to the local newspaper or radio station, may well be included in a newsletter from the school to the parent and businesses, etc.

Whenever career education activities are begun in a school, or whenever new methods are added to a career education program, a newsletter should carry that news home to the parents.

They need not be elaborate, a mimeo will do. They should carry summaries of career education activities. (depending on local attitudes, mention names and places and activities)

In cases where community resource persons have been utilized in the classroom, that should be noted.

If an actual newsletter similar to a school newspaper is being contemplated it may be possible to involve English or journalism classes on the high school level. Some journalism classes may be large enough to allow part of that class to alternate working on the school paper and on the newsletter. Reporting to adults about interests in the school can be significantly different than communicating to the students about the school. This may be discussed with the journalism instructor.

If time and personnel warrant it might be a good idea to include the minutes of meetings of the school board and career education steering committees.

CEPD #36 CAREER EDUCATION PROGRESS REPORT #4 January 30, 1976

NATÍONAL LEVEL NEWS

Congressman Perkins has introduced a Bill, H.R. 11023, to authorize a Career Education program for elementary and secondary schools throughout the United States. The Bill which really addresses K-14 education contains language both for the authorization and appropriation of funds. (This is Congress' effort to gain control of budgeting process.) The Bill calls for massive funding, beginning with 1977 (\$100,000,000), with reducing amounts each year through 1980 (\$25,000,000). Monies would be allocated to states in accordance with population and would be distributed in accordance with a state plan to local districts. Since introducing the Bill, Perkins has been receiving approximately 100 letters per day in support of the Bill. Hearing will be held in-February on it, and_Bill Weisgerber, Michigan Department of Education, and Al Lorent , State Career Education Member and member of the AFL, will testify. Money would be spent for such things as staff inservices, materials, coordinators, and the like. If interested, our office would be happy to send you copies of the Bill on request.

STATE LEVEL NEWS

The National Institute of Education Grant Proposal (\$1 million per year for possibly the next four and one half years) will be submitted to NIE by the middle of February. The proposal has recently received endorsement from the following groups: The Intermediate School District Superintendents Council of "23", the State Career Education Commission, and the State CEPD Coordinators. We will keep you informed on developments.

You either received or shall soon receive a letter from Dr. John Porter congratulating you for developing your 1975-76 Career Education plan and wishing you success in your efforts to implement it. 520 school districts in Michigan submitted plans for the 1975-76 school year. 12 school districts in Michigan did not submit plans. They received letters from Dr. Porter noting their non compliance with Public Act 97's mandate and were urged to do all in their power to rectify the situation. As of our meeting Thursday, two of the twelve districts had already begun such moves.

A draft of the 1976-77 Career Education planning form was made available at our CEPD leadership meetings in Lansing and we have the following to report relative to it and the planning process.

- 1: Emphasis for 1976-77 will be suggested for four major areas: Instruction, Guidance, Planhing for Placement, and Professional Development.
- 2. Planning will include efforts using local district resources as well as efforts to be handled through outside sources.

- 3. Districts will discuss in narrative fashion the results of their efforts in achieving the objectives of the 1975-76 plan.
- 4. Districts will be asked to identify long range goals beyond 1976-77 as a part of the plan.

Phil Kearney, Deputy Superintendent of the Michigan Department of Education, noted that presently, \$12,000,000 is spent annually for inservice education in Michigan. The major problem is that most aid is categorical and administered in a fragmented approach. Note: Look for efforts to better coordinate the utilization of such funds in accordance with annual planning in the future.

Our Region XII Career Education Staff met with the State Career Education Commission's Sub Committee for Professional Development. The Committee is trying to draft a Professional Development plan to use as a basis for funding by the state legislature. Our area was invited to give input to the Committee because of the extensive experience this geographical area has shown in Professional Development efforts.

REGION XII AND CEPD #36 NEWS

We have submitted for final preparation, our part of a proposal grant which is to go to the United States Office of Education. If funded, our area will receive approximately \$30,000 to implement some Career Education efforts. Approximately one half of the grant money will go to defray costs of released time for teacher inservice. One feature of the proposal will be to identify and develop three exemplary programs in the Region, including the obtaining of student achievement data from Career Education instructional treatment.

Assessments are being conducted in CEPDs, #35, #36, and #47 to determine progress of local districts in achieving 1975-76 Career Education plans. These assessments are being conducted to:

- Determine what modification on delivery of CEPD or Regional Services between now and the end of the year.
- Anticipate some areas of emphasis of local districts for the 1.976-77 fiscal year and ways CEPD and Regional Services might benefit those efforts: (This is very important with the moving ahead of the NIE Grant Proposal.)
- 3. Begin the process of planning for the 1976-77 fiscal year by local districts, CEPDs, and the Region.

CEPD COUNCIL NEWS

The Council conducted its second meeting and, among other things,

approved an organization chart noting the relationship of the Council with other groups and organizations.

MINUTES OF THE CEPD #36 CAREER EDUCATION IMPLEMENTATION COMMITTEE February 16, 1976

The meeting was called to order by Chairperson Carl Pacachu at 9:35 a.m.

Present were: Albion, Bill Garrett; Athens, David Nofz, Gar Underwood; Battle Creek, Vern Pots; Bellevue, Doug Kane; Harper Creek, Glen Walter; Hastings, Fred Lowe; Homer, Philip Duff; Lakeview, Carl Pacachu; Marshall, Bob Lowman; Olivet, Dale Barr; Quincy, Penny Chard; Springfield, Norm Barea; Tekonsha, Diane Voshell; Union City, William Denton; Calhoun-Intermediate School District, Roger LaBonte.

On a motion by Norm Barea, seconded by William Garrett, the minutes of the January 16, 1976 meeting were approved as printed.

Roger LaBonte was called upon to give a short progress report on Career Education issues. He noted that a guidance planning proposal would be submitted shortly. He discussed the specifics of a proposal submitted to the U.S. Office of Education as a part of six sites in the State promoting Career Education.

Roger then noted the results of the recent Assessment Survey conducted in CEPD #36 and asked Committee members for their reaction to the Assessment and where they saw themselves in further promoting Career Education locally.

The following summarizes the results of most district's efforts:

Most districts are involved in awareness oriented activities. The following districts have either established or are working toward the establishment of a definition of Career Education for their districts: Marshall, Springfield, Albion, and Bellevue.

- -- Most districts are now involved in awareness oriented activities:
- --Some districts have adopted district goals.
- --A few districts have teachers actively involved in planning and implementing instruction related to district goals.
- --Some districts have decided to call Career Education something else as a means of selling the concepts it promotes.

The following appear to be the most severe problems facing local local districts in their efforts:

- -- Lack of administrative support for Career Education.
- -- Lack of understanding as & what Career Education really is and how it related to the curriculum.

What are the next steps to be taken once awareness is completed in the district?

--- How do we get released time for staff to do the necessary planning?

It was decided that for the next meeting each Committee member would share the things their district has done in creating awareness or otherwise organizing to get Career Education off the ground. Each Committee member was encouraged to bring "handouts" in sufficient quantities for each Committee member.

The Committee reviewed briefly a rough "indicator of progress" sheet which would have the purpose of providing for local districts a flexible yet definitive road map identifying the logical next steps to be taken in the development of a local district Career Education program. Doug Kane and Robert Lowman agreed to serve on a Region XII Committee which would establish a document for review at the next meeting of the Committee.

A proposal for establishing timelines in the development of the LEA Career Education plans for 1976-77 was discussed. After much comment, the proposed plan was approved by the Committee as its planned steps. This proposal will be submitted for review and comment of CEPD #35 and #47.

It will be the intent to establish on a Region XII level an overall game plan which might be given favorable consideration for any funding which could be identified through the NIE Grant which is expected for Michigan for 1976-77.

There being no further business before the Committee, the meeting was adjourned at 11:30. The next meeting was scheduled for Monday morning, March 15, at 9:30 a.m.

coordinato

feature articles Large metropolitan dailies rarely have the space for feature articles on relatively local happenings in education. Widespread phenomena may be the subject of an occasional feature article, but these usually are tied to actual events (i.e.: a high school that achieves a 92% job-placement rate for a specific graduating class, when the average is about 55%, a school whose career education program has progressed to the point, where the curriculum no longer carries the labels of reading, writing and arithmetic, and courses have changed into multifaceted learning experiences.)

Best placements for career education features probably are in local daily or weekly papers, that concentrate on local news, and leave the regional and national news to the larger papers.

If feature articles are done for local papers, a certain amount of rapport with the editor is helpful. Some promoters have gone to local editors and offered to do a weekly or monthly series on the local educational scene.

Feature articles, should attempt to focus on what is being done and why, while a general introduction into career education philosophy is kept in mind.

Documentation of examples and a tie-in with local circumstances help a presentation. Philosophical discussions usually don't receive extensive readership. Features should be interesting and informative. A random survey of the feature articles in the dailies can give the promoter a multitude of good ideas about structure and the flow of an article.

If the promoter has not written for general public consumption in the past there is a technique that offers a chance to write and analyze, and develop skills that y may increase the effectiveness of the features.

- Write and research the feature in the beginning of the week. Clean and edit as much as possible. Forget about it for a while.
- 2. When the Sunday paper comes, get it out and inidentify four or five feature articles. (Family living, history, social commentary, personalities)
- Read some of them. Read your feature article, Read the remaining feature articles. This may give you some ideas about how to make your article flow better, maintain interest, and communicate better.

4. Remember that, effective feature writing can be done by most persons with a little practice. It pays to be critical of one's own work. Take pride, but not so much you can't admit there are faults in your articles. You may spot some weaknesses after the articles have been published. Use your own work as a yardstick of whether or not you are communicating better as time goes on.

news releases News releases can be an effective way of keeping the career education efforts of the schools before the public.

Releases should be sent out, only when there actually is something to report. They should come out in advance of an event, that is considered newsworthy. ("Old news is no news," carries a lot of weight in publishing.)

A promoter establishing rapport with the local editor helps the acceptance of news releases as it does with any of the media contact attempts.

Most newspapers use a writing style called "pyramid." It isn't difficult to understand. Just make sure all the vital information is in the first two paragraphs, then fill in with greater detail in subsequent paragraphs, (in order of the importance of the material.) The reason for this, is that most copy fitting is done in such a manner that stories set in type are juggled around a page until they fit an available column. If there is a space, where the column length is a bit short for the story, but no others available at the time, the copysetter will begin cutting the story from the bottom, paragraph by paragraph, until it fits the space. This may seem a bit crass on the part of the newspaper, but space is what makes or breaks a newspaper. And too, with the pyramid style in such wide usage, layout persons assume, and rightly so, that all copy is written this way and they are not damaging the principal content of the story.

A traditional way of determining if a news story has what it needs to be understood, is called "the Five "W's" and an "H". Simply who, what, when, where, why, and how. If promotional news releases contain this information in the first two paragraphs, they probably will fit the requirements of most community papers.

As with any other form of promotion, practice will sharpen the abilities of the promoter. If the newspaper rewrites the copy with regularity, the promoter should attempt to learn what the rewriter is doing and incorporate those techniques. Once the copy begins to read like the paper's style, its chances of acceptance as copy should increase.

FOR IMMEDIATE RELEASE*

A "Career Education in Michigan" exhibit will be displayed,
January 12th, 13th and 14th in the South Court of the Genesee Valley
Center.

The Michigan Department of Education has arranged for the loan of this exhibit as part of Genesee Intermediate School District's year-long career education awareness efforts:

emphasizing career opportunities for young people. Students from

Carman and Swartz Creek will be on trand to answer questions about

the exhibit.

Mr. ______, Gareer Education Planning District

Coordinator for Genesee County will preside at the opening ceremony.

planned for 18 AM the morning of January 12 in the South Court of

Genèsee Valley Center.

FOR IMMEDIATE RELEASE

Michigan Career Education Exh≠bit*
in Flint

Career Education in Michigan is the theme of an exhibit to be on display in the South Court of the Genesee Valley Mall January 12-14. The Michigan Department of Education has arranged for the loan of the exhibit as part of Genesee Intermediate School District's year-long career education awareness effort. Items on display will depict the many ways our schools are emphasizing career opportunities for young people. Students from Carman and Swartz Creek will be on hand to supervise the exhibit every day during normal shopping hours.
